ARAK

A traditional Middle Eastern aniseed spirit, distilled from the finest grapes and triple-distilled in copper stills for exceptional purity. Smooth and aromatic, with a refined liquorice-like depth, it transforms from crystal clear to a milky opalescence when mixed with water. A timeless apéritif, best savoured alongside mezze, **available by the glass or bottle.**

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 2.5 billion in 1980 to 3.6 billion in 1999. The number of people aged 65 years and over has increased by 0.2 billion, from 0.2 billion in 1980 to 0.4 billion in 1999.

These changes in the world population have led to a significant increase in the number of people who are under 15 years of age, from 1.1 billion in 1980 to 2.3 billion in 1999. This increase has been driven by a combination of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the life expectancy.

The decline in the death rate has been a major factor in the increase in the world population. The death rate has declined from 19.5 per 1,000 in 1980 to 10.5 per 1,000 in 1999. This decline has been driven by a combination of factors, including a decline in the infant mortality rate, a decline in the mortality rate for children under 5 years of age, and a decline in the mortality rate for adults.

The decline in the birth rate has also been a major factor in the increase in the world population. The birth rate has declined from 2.5 per 1,000 in 1980 to 1.5 per 1,000 in 1999. This decline has been driven by a combination of factors, including a decline in the fertility rate, a decline in the marriage rate, and a decline in the divorce rate.

The decline in the life expectancy has also been a major factor in the increase in the world population. The life expectancy has declined from 72 years in 1980 to 67 years in 1999. This decline has been driven by a combination of factors, including a decline in the life expectancy for men, a decline in the life expectancy for women, and a decline in the life expectancy for children.
