

INSTRUCTIONS

1. Remove items from box.
2. Open bag. Fold down top – this can help keep bag open during windy conditions.
3. Place weighted plastic rectangle base into bottom of bag with circle indent facing up. **Place length of base across the width of the bottom of the bag to keep edges as far away from flame as possible** (see diagram on other side). This is especially important in windy conditions.
4. Take silver foil candle drip protectors and open them up by widening indent with your thumb/fingers to create a hollow half circle. Join candle base to inner bottom to create a cup around candle to catch dripping wax. Try not to make any tears in the silver foil.
5. Insert candle joined to drip protector into the weighted base indent at the bottom of your bag. The silver drip protector should be at the bottom of the candle and fit snugly into the weighted base to keep the candle upright. Spread foil out from candle to create a wide cup to catch any potential dripping wax.
6. Take bags with base/drip protector/candles outside and place wherever you want your luminaries. A dry level surface works best. Never place luminaries near other flammable objects. **DO NOT USE LUMINARIES INDOORS.**
7. Light wick on candle being careful not to start bag on fire and making sure candle is secure in base. Children should be supervised - especially during this step. **PAPER BAG IS FLAMMABLE** so use more caution than a regular candle/holder set up.
8. Like any other lit candle, you should check on your luminaries regularly. Sometimes luminary candles can be re-lit if they burn out early, just straighten wick and try to light again.
9. Clean up should be easy since the silver foil drip protector should capture any melted wax. Be sure flame is extinguished. Just remove drip protector with candle wax contained inside and discard. Bags will usually need to be thrown away too.
10. Reusable plastic weighted base can be retained, stored, and used again! You will be able to order just candles, drip protectors, and bags from our website starting in 2021. If hot wax melts the base, you might still be able to repair and use again, otherwise order a replacement from us.
11. Luminaries work best on a calm, dry, dark night. If conditions are exceptionally windy and bags are blowing over, you can add more weight to the base by putting sand, rock, etc. below or on top of base. Usually, our weighted bases alone are enough.
12. Only use LUMINARIES FOR LOVE candles, bags, and drip protectors with our bases! Other candles might not fit.

LUMINARIES FOR LOVE is not responsible for the negligent use of our products
