

QR Guard and Smart Reel

PNI is not afraid to have you test your fiber every step of the way; in fact, we encourage it.

This is why our reels are different, Test Connectors on every reel.

We can test and certify multiple reels for each segment.

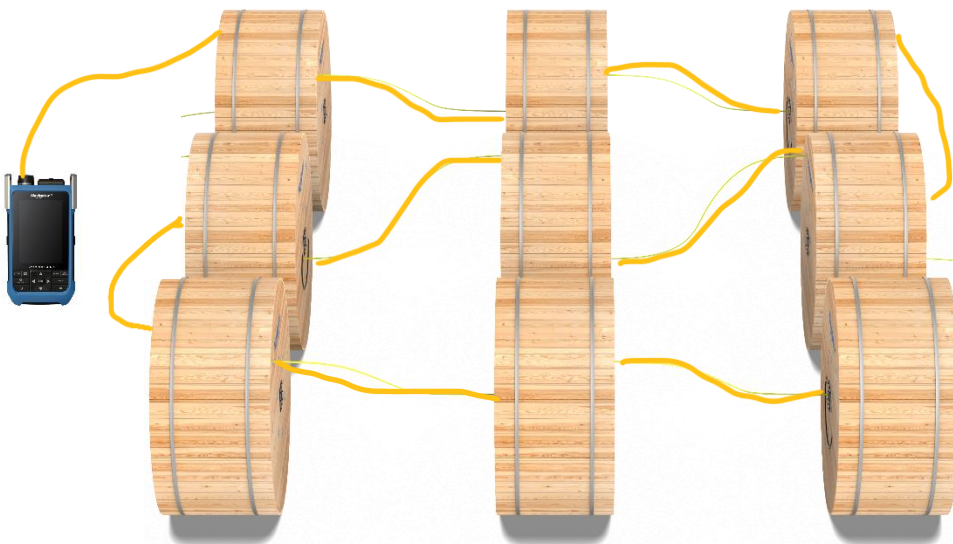

Our QR codes provide quick access to datasheets, cable prep videos, warranty registration, and more to ensure our fiber is installed correctly.

We begin our process by drawing Fujikura glass into fiber that outperforms most industry leaders.

We thoroughly test our fiber for strength and performance.

Reach out to us and share the projects you are working on. we will do our best to help!

Game Changed!

QR Guard and Smart Reel

SCAN The QR Code to get Data Sheets Certification Results, installation videos, warranty registration and more.

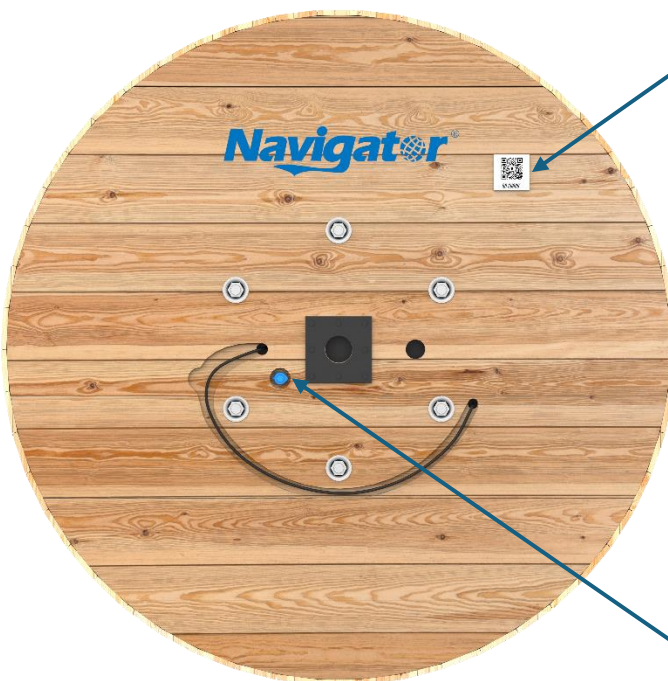

Each reel has 3 connectors, 2 on the Left side and 1 on the right. Fiber one is connected on both ends and the last fiber on each reel is the 2nd connector on the left side

Test one reel or link them together to test entire segments

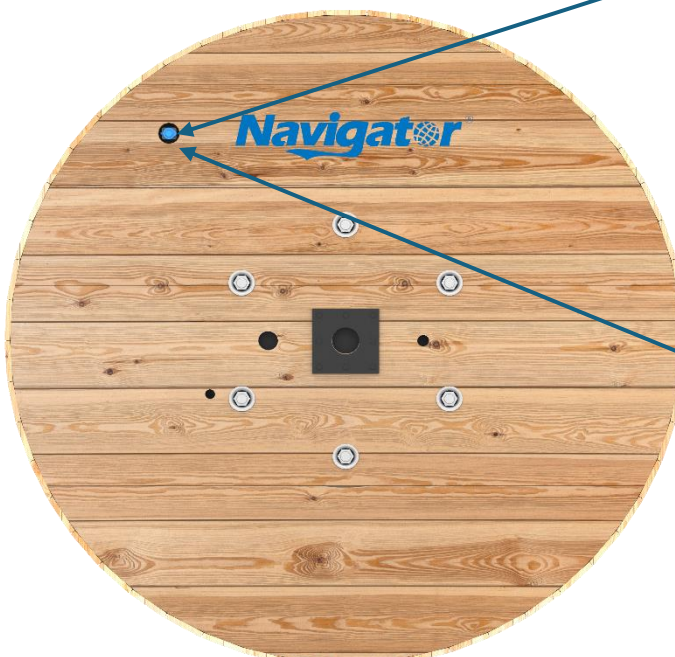

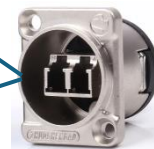

Setup test beds to test & evaluate equipment configurations prior to deployment

AVAILABLE IN
