

VERTICAL SUPPORT SYSTEM

- 1. Choose the location.** The Boat Cover Support can be placed anywhere along your boat railing. Position the system with the white anchors on each side of the boat railing.
- 2. Set the initial height.** Start by adjusting the arch approximately 12 inches higher than the boat railing.
- 3. Position and test the helper.** Try different locations along the railing until you find the position and height that work best for your canvas. Every boat is different.
- 4. Attach the canvas.** Snap your canvas into place and check the fit and support.
- 5. Tighten the screws.** Once you have found the correct position and height, tighten the screws securely with a Phillips screwdriver.
- 6. Adjust the rotating arms** .Position the rotating arms as needed to provide the best support for your canvas. Each rotating arm has two adjustment holes to accommodate different setups.
- 7. Mark the location.**
Once you have found the ideal position, mark the location of the Boat Cover Support on the railing. This makes future setup quick and easy.

How Many Do I Need?

This works for well for a 9-12 ft boat so one Boat Cover Support may be enough for this size boat. However, for boats approximately 20 feet long. For additional support, we recommend using two Boat Cover Supports.
