

Asbestos in the Home

*Asbestos usage has declined dramatically and in several cases, its usage has been banned. As a result, older homes are more likely to be at risk.

- A Exterior Surfaces**
 1. Roof Felt and Shingles
 2. Window Putty
 3. Cement Asbestos Board Siding / Undersheathing
- B Insulation**
 1. Vermiculite Insulation
 2. Batt Insulation
- C Flooring**
 1. Vinyl Asbestos Flooring Material
- D Interior Surfaces**
 1. Sprayed-on Ceiling Material
 2. Textured Paint
- E Boilers, Heating and Piping**
 1. Heat Source Covering
 2. Door Gaskets
 3. Duct Lining
 4. Wall Gaskets and Lining
- F Electrical Equipment**
 1. Recessed Lighting
 2. Wiring Insulation
 3. Fuse Boxes
 4. Outlets
- G Appliances**
 1. Refrigerators / Freezers
 2. Range Hoods
 3. Woodstoves (Heat Reflectors)
 4. Clothes Dryers

* Not Shown: Dishwashers, Toasters, Slow-cookers, Portable Heaters, Hair Dryers
- H Miscellaneous**
 1. Fireplace Logs
- J Automotive**
 1. Brake Linings, Gaskets, and Clutch Facings

ASBESTOS CONDUCTING INSPECTIONS

Renovation and Demolition of Buildings

Regulations under the Clean Air Act specify that work practices for asbestos be followed during demolitions and renovations of all facilities, including, but not limited to, structures, installations, and buildings (excluding residential buildings that have four or fewer dwelling units). The regulations require a thorough inspection where the demolition or renovation operations will occur. Work practices often involve removing all asbestos-containing materials and disposing of the asbestos-containing waste material.

If the total amount of asbestos to be removed or disturbed is less than 260 linear feet, 160 square feet, or 35 cubic feet off of facility components, then the Asbestos NESHAP regulations does not require regulated asbestos-containing material to be removed before demolition or renovation activities occur.
