  - State regulatory programs
  - Manufacturing industries
  - Consulting industries

*Enclosures – Standard  
Color Matching Systems – Standard*

## WHAT YOU NEED TO KNOW

Gonyaw Environmental Services, LLC (GES), offers a service unique to all industries. If you are looking for **Radon Mitigation**, you need to ask “what is the background of the mitigation company?” Jay Gonyaw brings a unique background to you that offers the knowledge of a BS in Environmental Science, as well as 22 years of plumbing, HVAC, and radon mitigation experience. With this combination, the customer gets the highest quality and craftsmanship, as well as the educational understanding of the scientific aspect of the gas.

If you are looking for **Water Treatment Systems** an **Asbestos Inspection**, **UST Closures** or an **Environmental Phase I** for a residence, commercial property, or industrial facility, GES offers the construction and industrial manufacturing expertise that is needed for economically responsible decisions.

## TWO IMPORTANT QUESTIONS TO ASK

**Q: Why are they offering add-ons and upgrades for radon mitigation?**

GES offers only the best when it comes to a radon installation and when GES installs a radon system you get the upgrade at no additional cost and it is installed to the quality that Jay Gonyaw would want at his house.

**Q: Do all mitigators install systems according to the current standards? – NO.**

Traveling around the state, you will see various radon mitigations systems mounted on the sides of homes. The most common mistake you will see is the pipe terminating at or under the eve of the home. This might remove the radon from the basement; however studies have proven that this not only creates a moisture and mold problem on the eve and soffits, it dramatically increases the radon levels on the first or second floor from re-entrainment through the vents on the eves.
