Re: Technical Report, INM Analysis 2013

Dear Ms. Vail:

Attached is a Technical Memo in pdf form that fully details the development of the 2013 noise contours for East Hampton Airport traffic during 2013. This is responsive to Peter Kirsches and your own requests. It is consistent with the information provided in response to the FOIL request which I forwarded to you on November 5th.

The data has been thoroughly reviewed and the report is responsive to your request for details, assumptions and rationale used in the analysis. We will provide the case files after you have reviewed this information and provided your approval.

Now that Federal Assurances have lapsed, the likelihood of litigation is diminished and the sensitivity of this information similarly reduced. Proceeding on the 2014 annual contour is recommended.

If you have comments or questions, please call me at your convenience.

Sincerely,

Henry A.F. Young

Henry A. F. Young
