

DYNALASE

first

Assistive diagnostics technology for
dermatology, skin and hair health

How does *f.i.r.s.t.* help?

- Measuring over 90 face and hair metrics for assessments and measurements
- Upto 99% accuracy for in-clinic diagnosis
- Longitudinal monitoring and compliance
- Progress tracking and analytics
- Subscription or pay-per-scan models

Our scans include:

Complete Face Scan

Covers all attributes of face skin health and structure with possible improvement metrics highlighted with visualisation

Indication analysis

Differential indication analysis for scars and pigmentation to ensure high precision diagnosis with upto 99% in-clinic accuracy

Contour scans

Anthropometry derived symmetric analysis for understanding best treatment modality of injectables, RF, HIFU or laser lipolysis with quantified markers of improvement

Progress analytics

Upload the pre treatment and post treatment photographs for a complete comprehensive comparative assessment

Dermoscopic hair scan

Measuring the hair and scalp integrity and health, providing detailed analysis and differential diagnosis for hair concerns

Complete contour scan

Anthropometry analysis for comparative modalities of injectables, RF and HIFU to understand what works best for the patient

Premium super scan

The wholesome combination of face scan and complete contour scan to provide a holistic assessment of patients' needs

Get your f.i.r.s.t. scan today!

Our vision

- Pioneering healthtech in dermatology with advanced systems for diagnostics
- Provide high precision outputs for best results
- Making dermatology healthcare accessible
- Indigenous tech with a global impact
