

The 9th Annual

PLATINUM ALLIANCE

All Breed Bull & Female Sale

12 Noon CST

December 2, 2023

Tennessee Tech University

Hyder-Burks Pavilion

Cookeville, Tennessee

www.PlatinumAllianceBulls.com

Welcome to the 9th Annual Platinum Alliance Bull and Female Sale!

We have an excellent offering of bulls and females for you on December 2nd. The cattle will be available for viewing on video in mid-November at www.platinumalliancebulls.com, and in person on Friday afternoon December 1st. These cattle are great quality, and from herds that are productive with good health programs. The cattle are pictured for you in their working clothes, and are ready to perform in your program.

All the mature cattle will be dewormed, double vaccinated for respiratory diseases, colostridium, vibriosis, lepto., have 840 EID tags, and negative testing for PI-BVD and Johnes. All bred females will be pregnancy checked, and all bulls will have passed a BSE, and any non-virgin bulls will have a negative Trich. test. Some of the bulls already have Genomic EPD's, and we have several others that will have results back by sale day. There will be a floor price of \$2400 on all bulls. Many of these bulls and females qualify for TAEP, and are a great investment for you. Please check the webpage www.platinumalliancebulls.com for updates, more pictures, and videos. We hope to see you the first week of December, but if you are unable to attend online bidding is available thru www.kemmerauctioneers.com website. Please feel free to give us a call with any questions.

Thank you for your interest,
Amanda Houser

SALE VIDEOS & PHOTOS

www.PlatinumAllianceBulls.com

TRUCKING

Truckers believed to be reliable will be available to assist you in shipping your purchases.

EPD'S

All EPDs were current as of November 1st.

TERMS & CONDITIONS

All cattle sell under the suggested terms and conditions of the respective breed association in which they are registered. Registration papers will be transferred at the seller's expense. Buyers must provide name and address for transfer. Animals cataloged as "commercial" are not registered with any breed registry; therefore, buyers will not receive registration.

HERD HEALTH

All cattle will be accompanied by proper health certificates for immediate interstate shipment. All cattle have been tested negative for PI-BVD & Johnes and sell current on vaccinations and dewormed. All service age bulls will have passed a breeding soundness exam and are guaranteed satisfactory breeders.

LIABILITY

All persons attending this sale do so at their own risk, legal or otherwise, in regards to their general safety and the behavior of the animals. No individual nor group or entity associated with cattle ownership, the sale management, sale staff, sale site, nor the university assumes any liability for any personal harm, property loss or damage, or injury from any cause, including but not limited to accidents, act of violence, or natural disaster.

Consignor: **Maple Tree Simmentals**

Here's a TJ Gold Son by a first calf heifer, who did a great job! He posted a VV of over 700 lbs! He has more frame and length than most of the Gold progeny which supports his high growth EPD's for VV and YW. He should work well on any type of cowherd by adding performance without the worry of increasing BW.

Kaleb is Homo. Black son of our previous calving ease sire that is easy going and balanced. His API and TI are both top 30%. If you are one of those with wide variety of cow sizes and types, this bull could be the answer. He should add uniformity to his calves in both size and color as well as muscle shape.

Visit theLONGRANGElook.com to learn more.

LONGRANGE (EPINOMECTIN) IMPORTANT SAFETY INFORMATION: Do not treat within 48 days of slaughter. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows, or in veal calves. Post-injection site damage (e.g., granulomas, necrosis) can occur. These reactions have disappeared without treatment. Not for use in breeding bulls, or in calves less than 3 months of age. Not for use in cattle managed in feedlots or under intensive rotational grazing.

¹ Dependent upon parasite species, as referenced in FOI summary and LONGRANGE product label.

LONGRANGE® and the Cattle Head Logo® are registered trademarks of Boehringer Ingelheim Animal Health USA Inc. ©2022 Boehringer Ingelheim Animal Health USA Inc., Duluth, GA. All Rights Reserved. US-BOV-0055-2022C

Extended-Release Injectable Parasiticide

5% Sterile Solution

For the treatment and control of internal and external parasites of cattle on pasture with persistent effectiveness. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows. Not for use in calves to be processed for veal.

Not for use in breeding bulls, or in calves less than 3 months of age.

Not for use in cattle managed in feedlots or under intensive rotational grazing.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

INDICATIONS FOR USE

LONGRANGE, when administered at the recommended dose volume of 1 mL per 110 lb (50 kg) body weight, is effective in the treatment and control of the following internal and external parasites of cattle:

Gastrointestinal Roundworms	Lungworms
<i>Bunostomum phlebotomum</i> – Adults and L ₄	<i>Dictyocaulus viviparus</i> – Adults
<i>Cooperia oncophora</i> – Adults and L ₄	
<i>Cooperia punctata</i> – Adults and L ₄	
<i>Cooperia surrabadia</i> – Adults and L ₄	
<i>Haemonchus placei</i> – Adults	
<i>Oesophagostomum radiatum</i> – Adults	
<i>Ostertagia lyrata</i> – Adults	
<i>Ostertagia ostertagi</i> – Adults, L ₄ and inhibited L ₄	
<i>Trichostrongylus axei</i> – Adults and L ₄	
<i>Trichostrongylus colubriformis</i> – Adults	
	Grubs
	<i>Hypoderma bovis</i>
	Mites
	<i>Sarcoptes scabiei</i> var. <i>bovis</i>

Parasites	Durations of Persistent Effectiveness
Gastrointestinal Roundworms	
<i>Bunostomum phlebotomum</i>	150 days
<i>Cooperia oncophora</i>	100 days
<i>Cooperia punctata</i>	100 days
<i>Haemonchus placei</i>	120 days
<i>Oesophagostomum radiatum</i>	120 days
<i>Ostertagia lyrata</i>	120 days
<i>Ostertagia ostertagi</i>	120 days
<i>Trichostrongylus axei</i>	100 days
Lungworms	
<i>Dictyocaulus viviparus</i>	150 days

DOSAGE AND ADMINISTRATION

LONGRANGE® (epinomectin) should be given only by subcutaneous injection in front of the shoulder at the recommended dosage level of 1 mg epinomectin per kg body weight (1 mL per 110 lb body weight). Each mL of LONGRANGE contains 50 mg of epinomectin, sufficient to treat 110 lb (50 kg) body weight. Divide doses greater than 10 mL between two injection sites to reduce occasional discomfort or site reaction. Do not underdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment, and encourage the development of parasite resistance.

LONGRANGE is to be given subcutaneously only. Animals should be appropriately restrained to achieve the proper route of administration. Inject under the loose skin in front of the shoulder (see illustration) using a 16 or 18 gauge, 1/2 to 3/4 inch needle.

Sanitize the injection site by applying a suitable disinfectant. Clean, properly disinfected needles should be used to reduce the potential for injection site infections.

Body Weight (lb)	Dose Volume (mL)
110	1
220	2
330	3
440	4
550	5
660	6
770	7
880	8
990	9
1100	10

Withdrawal Periods and Residue Warnings

Animals intended for human consumption must not be slaughtered within 48 days of the last treatment. This drug product is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. A withdrawal period has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.

Animal Safety Warnings and Precautions

The product is likely to cause tissue damage at the site of injection, including possible granulomas and necrosis. These reactions have disappeared without treatment. Local tissue reaction may result in trim loss of edible tissue at slaughter.

Observe cattle for injection site reactions. If injection site reactions are suspected, consult your veterinarian. This product is not for intravenous or intramuscular use. Protect product from light. LONGRANGE® (epinomectin) has been developed specifically for use in cattle only. This product should not be used in other animal species.

When to Treat Cattle with Grubs

LONGRANGE effectively controls all stages of cattle grubs. However, proper timing of treatment is important. For the most effective results, cattle should be treated as soon as possible after the end of the heel fly (variable fly) season.

Environmental Hazards

Not for use in cattle managed in feedlots or under intensive rotational grazing because the environmental impact has not been evaluated for these scenarios.

Other Warnings: Parasite resistance may develop to any dewormer, and has been reported for most classes of dewormers.

Treatment with a dewormer used in conjunction with parasite management practices appropriate to the geographic area and the animal(s) to be treated may slow the development of parasite resistance.

Fecal examinations or other diagnostic tests and parasite management history should be used to determine if the product is appropriate for the herd/flock, prior to the use of any dewormer. Following the use of any dewormer, effectiveness of treatment should be monitored (for example, with the use of a fecal egg count reduction test or another appropriate method).

A decrease in a drug's effectiveness over time as calculated by fecal egg count reduction tests may indicate the development of resistance to the dewormer administered. Your parasite management plan should be adjusted accordingly based on regular monitoring.

Macrocyclic lactones provide prolonged drug exposure that may increase selection pressure for resistant parasites. This effect may be more pronounced in extended-release formulations.

TARGET ANIMAL SAFETY

Clinical studies have demonstrated the wide margin of safety of LONGRANGE® (epinomectin). Overdosing at 3 to 5 times the recommended dose resulted in a statistically significant reduction in average weight gain when compared to the group tested at label dose. Treatment-related lesions observed in most cattle administered the product included swelling, hyperemia, or necrosis in the subcutaneous tissue of the skin. The administration of LONGRANGE at 3 times the recommended therapeutic dose had no adverse reproductive effects on beef cows at all stages of breeding or pregnancy or on their calves.

Not for use in bulls, as reproductive safety testing has not been conducted in males intended for breeding or actively breeding. Not for use in calves less than 3 months of age because safety testing has not been conducted in calves less than 3 months of age.

STORAGE

Store at 77°F (25°C) with excursions between 59°F and 86°F (15°C and 30°C). Protect from light.

Approved by FDA under NADA # 141-327
