

THE 8TH ANNUAL ALLIANCE PLATINUM

ALL BREED BULL & FEMALE SALE
HYDER BURKS ARENA | COOKEVILLE, TN
DECEMBER 3, 2022 | 12:00 NOON CST

Welcome to the 8th annual Platinum Alliance Bull and Female Sale. We have an excellent offering of bulls and females for you on December 3rd. The cattle are available for viewing on video at www.platinumalliancebulls.com, and they will be available to be evaluated in the flesh at the sale facility Friday afternoon, December 2nd. These are great quality cattle from productive herds with viable health programs. Several are pictured in this catalog, all in their working clothes, and they are ready to perform in your program!

All the mature cattle will be dewormed and vaccinated (including boosters) for 4-way respiratory complex, clostridium (blackleg), vibriosis, and leptospirosis. Each animal selling will have an 840 EID, and all adult cattle will have a negative test for PI-BVD and Johnes. All bred females will be pregnancy checked, and all bulls will have passed a BSE by a licensed veterinarian which includes negative trich on all non-virgin bulls.

Some bulls are cataloged with genomic EPDs, and several others will have genomic results before sale day. Many of these bulls as well as females do qualify for TAEP, making them a great investment. All bulls will have a minimum floor price of \$2200.

Please check the webpage www.platinumalliancebulls.com for updates, more photos, and videos prior to sale day. We hope to see you the first week of December, and please feel free to give us a call with any questions.

Terms & Conditions

All cattle sell under the suggested terms and conditions of the respective breed association in which they are registered. Registration papers will be transferred at the seller's expense. Buyers must provide name and address for transfer. Animals cataloged as "commercial" are not registered with any breed registry; therefore, buyers will not receive registration.

Sale Updates & Announcements

A supplement sheet to this catalog will be available sale day. Any additional information or updates by the sale management and/or announcements made from the sale block will take precedence over any and all previously printed material.

EPDs

EPDs listed are current as of November 7, 2022. All EPDs are not listed due to space limitations. Visit the respective breed association's herd book page to obtain the most up-to-date and complete EPD profile.

Herd Health

All cattle will be accompanied by proper health certificates for immediate interstate shipment. All cattle have been tested negative for PI-BVD and sell current on vaccinations and dewormed. All service age bulls will have passed a breeding soundness exam and are guaranteed satisfactory breeders.

Sale Location

Hyder Burks Ag Pavilion
Tennessee Tech University
2390 Gainesboro Grade
Cookeville, TN 38501

Accommodations

Best Western Thunderbird 931-526-7115
Country Inn & Suites 931-325-6668

Food & Refreshments

Concessions will be available at the sale site on sale day.

Trucking

Truckers believed to be reliable will be available to assist you in shipping your purchases.

Liability

All persons attending this sale do so at their own risk, legal or otherwise, in regards to their general safety and the behavior of the animals. No individual nor group or entity associated with cattle ownership, the sale management, sale staff, sale site, nor the university assumes any liability for any personal harm, property loss or damage, or injury from any cause, including but not limited to accidents, act of violence, or natural disaster.

Cowboy is a really nice, well balanced bull that can work in about any situation. He started small as a heifer's calf, but he didn't stay that way long! He is from a high performance cow family that raise some of our best every year. His mother bred right back and is doing a great job again. Buy him and use him with confidence.

W6 Georgia Dream is a long bodied, sound, and attractive heifer. She sells bred to W6 Iron Hammer, a Steel Force son, and due to calve late February to early March. Her dam goes back to the famed Champion Hill Georgina, and she will produce offspring that will be very productive as her EPDs suggest.

B&K Flecka is heavy bred to our Profit son, 3Aces Cash In, and is due to calve around sale day. Flecka has an API of \$128 and a TI of \$71.2 and has earned a Milk EPD ranking in the top 30% of the breed. She is a stout and attractive female that will produce money making calves or your next replacement heifer.

Betsy is a big, deep, long bodied, well muscled female that is easy on the eyes and always does an excellent job. We offer every female that hasn't calved by sale day every year, and that's the only reason I am writing this footnote. Exposed to RS-Stetson C1 (ASA# 3093108) from 1/1/22 until 4/13/22 and is due to calve mid-December.

Extended-Release Injectable Parasiticide

5% Sterile Solution

For the Treatment and Control of Internal and External Parasites of Cattle on Pasture with Persistent Effectiveness

Not for use in female dairy cattle 20 months of age or older, including dry dairy cows. Not for use in calves to be processed for veal.

Not for use in breeding bulls, or in calves less than 3 months of age.

Not for use in cattle managed in feedlots or under intensive rotational grazing.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

INDICATIONS FOR USE

LONGRANGE, when administered at the recommended dose volume of 1 mL per 110 lb (50 kg) body weight, is effective in the treatment and control of the following internal and external parasites of cattle:

Gastrointestinal Roundworms	Lungworms
<i>Bunostomum phlebotomum</i> – Adults and L ₄	
<i>Cooperia oncophora</i> – Adults and L ₄	<i>Dictyocaulus viviparus</i> – Adults
<i>Cooperia punctata</i> – Adults and L ₄	
<i>Cooperia surnabada</i> – Adults and L ₄	Grubs
<i>Haemonchus placei</i> – Adults	<i>Hypoderma bovis</i>
<i>Oesophagostomum radiatum</i> – Adults	
<i>Ostertagia lyrata</i> – Adults	Mites
<i>Ostertagia ostertagi</i> – Adults, L ₄ and inhibited L ₄	
<i>Trichostrongylus axei</i> – Adults and L ₄	<i>Sarcoptes scabiei</i> var. <i>bovis</i>
<i>Trichostrongylus colubriformis</i> – Adults	

Parasites	Durations of Persistent Effectiveness
Gastrointestinal Roundworms	
<i>Bunostomum phlebotomum</i>	150 days
<i>Cooperia oncophora</i>	100 days
<i>Cooperia punctata</i>	100 days
<i>Haemonchus placei</i>	120 days
<i>Oesophagostomum radiatum</i>	120 days
<i>Ostertagia lyrata</i>	120 days
<i>Ostertagia ostertagi</i>	120 days
<i>Trichostrongylus axei</i>	100 days
Lungworms	
<i>Dictyocaulus viviparus</i>	150 days

DOSAGE AND ADMINISTRATION

LONGRANGE® (epinomectin) should be given only by subcutaneous injection in front of the shoulder at the recommended dosage level of 1 mg epinomectin per kg body weight (1 mL per 110 lb body weight). Each mL of LONGRANGE contains 50 mg of epinomectin, sufficient to treat 110 lb (50 kg) body weight. Divide doses greater than 10 mL between two injection sites to reduce occasional discomfort or site reaction.

Do not underdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment, and encourage the development of parasite resistance.

LONGRANGE is to be given subcutaneously only. Animals should be appropriately restrained to achieve the proper route of administration. Inject under the loose skin in front of the shoulder (see illustration) using a 16 or 18 gauge, ½ to ¾ inch needle.

Sanitize the injection site by applying a suitable disinfectant. Clean, properly disinfected needles should be used to reduce the potential for injection site infections.

Body Weight (lb)	Dose Volume (mL)
110	1
220	2
330	3
440	4
550	5
660	6
770	7
880	8
990	9
1100	10

Withdrawal Periods and Residue Warnings

Animals intended for human consumption must not be slaughtered within 48 days of the last treatment. This drug product is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. A withdrawal period has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.

Animal Safety Warnings and Precautions

The product is likely to cause tissue damage at the site of injection, including possible granulomas and necrosis. These reactions have disappeared without treatment. Local tissue reaction may result in trim loss of edible tissue at slaughter.

Observe cattle for injection site reactions. If injection site reactions are suspected, consult your veterinarian. This product is not for intravenous or intramuscular use. Protect product from light. LONGRANGE® (epinomectin) has been developed specifically for use in cattle only. This product should not be used in other animal species.

When to Treat Cattle with Grubs

LONGRANGE effectively controls all stages of cattle grubs. However, proper timing of treatment is important. For the most effective results, cattle should be treated as soon as possible after the end of the heel fly (warble fly) season.

Environmental Hazards

Not for use in cattle managed in feedlots or under intensive rotational grazing because the environmental impact has not been evaluated for these scenarios.

Other Warnings: Parasite resistance may develop to any dewormer, and has been reported for most classes of dewormers.

Treatment with a dewormer used in conjunction with parasite management practices appropriate to the geographic area and the animal(s) to be treated may slow the development of parasite resistance.

Fecal examinations or other diagnostic tests and parasite management history should be used to determine if the product is appropriate for the herd/flock, prior to the use of any dewormer. Following the use of any dewormer, effectiveness of treatment should be monitored (for example, with the use of a fecal egg count reduction test or another appropriate method).

A decrease in a drug's effectiveness over time as calculated by fecal egg count reduction tests may indicate the development of resistance to the dewormer administered. Your parasite management plan should be adjusted accordingly based on regular monitoring.

Macrocyclic lactones provide prolonged drug exposure that may increase selection pressure for resistant parasites. This effect may be more pronounced in extended-release formulations.

TARGET ANIMAL SAFETY

Clinical studies have demonstrated the wide margin of safety of LONGRANGE® (epinomectin). Overdosing at 3 to 5 times the recommended dose resulted in a statistically significant reduction in average weight gain when compared to the group tested at label dose. Treatment-related lesions observed in most cattle administered the product included swelling, hyperemia, or necrosis in the subcutaneous tissue of the skin. The administration of LONGRANGE at 3 times the recommended therapeutic dose had no adverse reproductive effects on beef cows at all stages of breeding or pregnancy or on their calves.

Not for use in bulls, as reproductive safety testing has not been conducted in males intended for breeding or actively breeding. Not for use in calves less than 3 months of age because safety testing has not been conducted in calves less than 3 months of age.

STORAGE

Store at 77° F (25° C) with excursions between 59° and 86° F (15° and 30° C). Protect from light.

Approved by FDA under NADA # 141-327

Made in Canada.

LONGRANGE (EPINOMECTIN) IMPORTANT SAFETY INFORMATION: Do not treat within 48 days of slaughter. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows, or in veal calves. Post-injection site damage (e.g., granulomas, necrosis) can occur. These reactions have disappeared without treatment. Not for use in breeding bulls, or in calves less than 3 months of age. Not for use in cattle managed in feedlots or under intensive rotational grazing.
