

Privacy and Policies

Absolutely no data, no history, no usage, nor any other personal information whatsoever is collected, stored, inferred, transferred, transmitted, or otherwise managed by this app. It is a simple, stand-alone app, made by a single individual, and has been thoroughly vetted by strict compiler and developer review processes.

The app allows YOU to select YOUR OWN images to use as texture maps and/or backgrounds solely for your uses within the app. Doing so (initially intending to select a Photos image) automatically triggers the operating system's privacy protocols on your device, which prompts you for your permission to pass only your selected image to apply wherever it was intended. In actuality, only the 'reference' to the selected image is passed to the app by the system, which is then fed directly back into your device's GPU/CPU for it to map each pixel onto 2D/3D generated surfaces, etc. - the app applies pure mathematics on pure data, accessed and processed directly by your device, on your device and your device only, and all at your direction and control. Any cloud image access or saving is also handled directly by you, and solely by your device.

The developer assumes no responsibility nor liability for any purpose of use, nor any data or privacy breaches, or online issues, all of which are far away and beyond the developer's control.

Please Enjoy!

Note: Select the orange question mark button "[?]" in the lower-right corner of the app to display the app's built-in 'Help, Tips, and Information' view, which includes all the information above, and much more.
