INNOVATIONS-4-INDUSTRY
INDUSTRIAL STRENGTH TECHNOLOGY ADVISORS

ERP Evaluation for the Supply Chain

ABOUT US

Innovations-4-Industry serves as an independent consultancy, specializing in advising Supply Chain organizations on choosing enterprise software that aligns seamlessly with their operational and financial needs.

With **over 30 years of ERP expertise** and a specialized methodology, we excel at requirements gathering and software selection, steering your organization towards the adoption of next-generation technologies that positively impact your bottom line.

Far from offering a one-size-fits-all strategy, our consultative approach is **tailored to your industry's unique complexities.**

Our team is deeply invested in your project's success and goes the extra mile to ensure that the solutions we recommend are in perfect alignment with your specific needs.

BACKGROUND

As founders of a leading national ERP provider with a three decade track record serving manufacturers and distributors, we offered a portfolio of solutions that featured industry leaders like **Infor, Microsoft, Oracle, SAGE, and SAP,** along with our own specialized suite of **WMS** and **Logistics** applications.

Recognizing that many businesses often grapple with the intricacies of the ERP evaluation process, we decided to leverage our extensive expertise.

We founded **Innovations-4-Industry** in 2023 to focus on guiding supply chain-oriented companies through the complex maze of selecting ERP technologies that align closely with their specific operational requirements, internal resources and financial budget.
