Download at ghidra.sce.org

Ghidra is a software reverse engineering (SRE) framework developed by NSA's Research Directorate for NSA's cybersecurity mission. It helps analyze malicious code and malware like viruses, and can give cybersecurity professionals a better understanding of potential vulnerabilities in their networks and systems.

NSA will be making Ghidra available to the public as an open source release in time for its first public demonstration at the 2019 RSA Conference this March. For more NSA releases, check out [CODE.NSA.GOV](https://code.nsa.gov) for open source, and NSA's Technology Transfer Program for other technology.

Key features of Ghidra:

- Includes a suite of software analysis tools for analyzing compiled code on a variety of platforms including Windows, Mac OS, and Linux
- capabilities include disassembly, assembly, decompilation, graphing and scripting, and hundreds of other features
- supports a wide variety of processor instruction sets and executable formats and can be run in both user-interactive and automated modes.
- users may develop their own Ghidra plug-in components and/or scripts using the exposed API
