* Snow pack depth near midnight

A White Christmas should have at least a half inch (a short inch) of general snow cover at sunrise Christmas Day. Several Christmases, most recently 2002, did not meet that criterion at sunrise, but became deeply snow covered later in the day. Such a Christmas could be called a "gray" Christmas. Other Christmas days with a light coating of snow could also be considered a "gray" Christmas. However, the above criteria are not official, and opinions may differ from the above, hence the "gray" terminology as in "gray" areas.

Compare Christmas Day averages for the 43 years of record (1982-2024) at LPWB with the LPWB (norms) smoothed from data a few days either side of 25 Dec.

Average Max Temp:	42.4 (42)	1911
Average Min Temp:	25.5 (27)	1028
Average Mean Temp:	34.2 (34.5)	
Average Precip:	0.15 (0.13)	6.27
Average Snowfall:	0.2 (0.3)	8.1
