

## Implementing Buffered And Floor ETFs ("BFE") In Your Portfolio

BFEs are typically implemented as an Equity Allocation Replacement for a portion of the equity piece of an asset allocation.

### Hypothetical Examples:

#### Portfolio Construction **BEFORE** Implementation Of Buffered And Floor ETF (BFE)

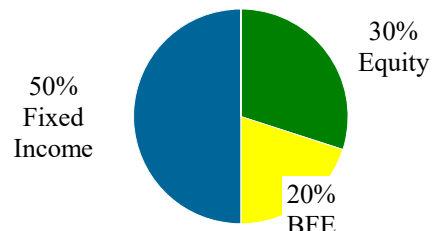

50% Equity / 50% Fixed Income

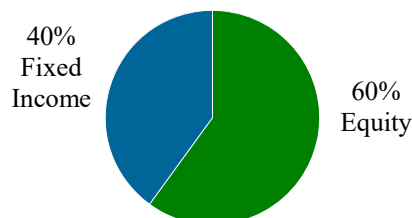

Reposition equity  
to help  
reduce risk  
& volatility,  
and create more  
stable returns.

#### Portfolio Construction **AFTER** Implementation Of Buffered And Floor ETF (BFE)

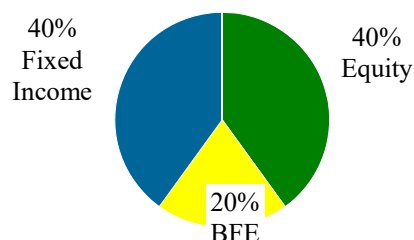

30% Equity + 20% BFE / 50% Fix Inc

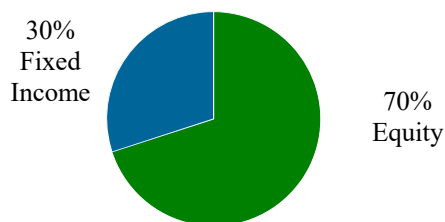

60% Equity / 40% Fixed Income

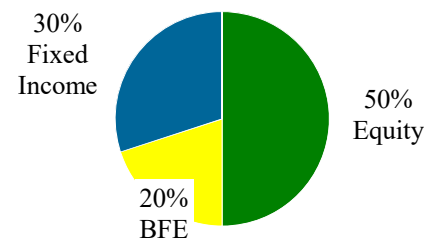

40% Equity + 20% BFE / 40% Fix Inc

70% Equity / 30% Fixed Income

50% Equity + 20% BFE / 30% Fix Inc

These examples are provided for illustrative purposes only and should not be construed as advice designed to meet the needs of an individual's situation.

Contact Green Pastures to learn more about how a BFE could fit into your portfolio.

#### \*Disclosure:

"BFE" are index-linked exchange traded funds (ETFs) consisting of Buffered ETFs (a.k.a., Defined Outcome ETFs) And Floor ETFs (a.k.a., Managed Outcome ETFs).

This is an illustration only, not an offer or contract. The purpose of this illustration is to demonstrate how a BFE works and how the performance of the indexed account options could affect a BFE's account value and features over an extended period of time.

The hypothetical rates and values are for illustrative purposes only and not intended to predict or project future performance. The values in these illustrations are not guarantees or even estimates of the amounts you can expect from a BFE. Current downside buffer and/or floor protection levels, index performance, upside performance caps, upside performance trigger rates and upside participation rates shown were not the rates in effect throughout the entire time period depicted in these illustrations. Downside buffer and/or floor protection levels, index performance, upside performance caps, upside performance trigger rates and upside participation rates available at the time of investment may not be the same as illustrated. The values do not reflect the deduction of applicable charges, expenses, and a 1/2 percent (0.50%) advisory fee.

The index portion of a BFE has a risk of loss that occurs each time you move into a new indexed account option after the end of an indexed term. However, the buffered or floor level option selected in the indexed account helps protect you from some (not all) downside risk. If the negative return is in excess of the buffered protection level selected, or the floor protection level threshold, then there is a risk of loss of principal.

Buffered and floor protection levels vary based on the index and term selected and are subject to change and may not be available with every option. The BFE value will fluctuate and is subject to investment risk and loss of principal. A BFE Fact Sheet and Product Brief are available upon request. Please request a Product Prospectus for more detailed information before considering the purchase of a BFE.

S&P 500 Index Values shown illustrate what account performance would have been, based on the market index. It is not possible to invest directly in an index.

Average Annual Return is the arithmetic mean of the annual return figures and does not reflect the impact of additional deposits and withdrawals.

Return values are rounded to two decimal places. Therefore, a return that is slightly negative or slightly positive may appear as 0.00%.

The information above is obtained from sources considered reliable, but it is not necessarily complete and its accuracy is not guaranteed. BFEs are subject to change in rates and availability at any time.
