^{*} This hypothetical illustration is not specific to the performance of any particular investment product and assumes a \$1,500,000 investment portfolio at age 67, an asset allocation mix of 50% equity + 50% fixed income, with an Annual Return of 6.00%.

Annual retirement income withdrawals are adjusted by 3% for inflation. Taxes, fees and expenses are not factored into this example.

Assumes Annual Social Security Benefit of \$36,000/year (\$3,000/month) beginning at age 67, adjusted by 2.50% for COLA (Cost Of Living Adjustment).

Past performance is no guarantee of future results.

This illustration assumes an Annual Return and does not take into consideration the potential consequences of Sequence Of Returns Risk from untimely bear markets.

The flexible withdrawal approach to retirement income planning may supplement Social Security Benefits, pensions, SPIAs and DIAs, part-time work, rental income and other sources of income to fund retirement incomes and lifestyles.
