

Pandemic Lifeline

Caregivers save more lives if they know where beds and ventilators are available

The Solution

We can rapidly implement an IoT solution that enables caregivers to send their patients where resources are available!

An independent network of Grail Solutions' resource monitoring devices reports bed and ventilator usage and capacity to a password protected website.

With our **Pandemic Lifeline Dashboard**, doctors can see what hospitals have beds and ventilators *in real time* and determine the nearest hospital to send their patients to.

Process Breakdown

Hospitals + Medical Facilities

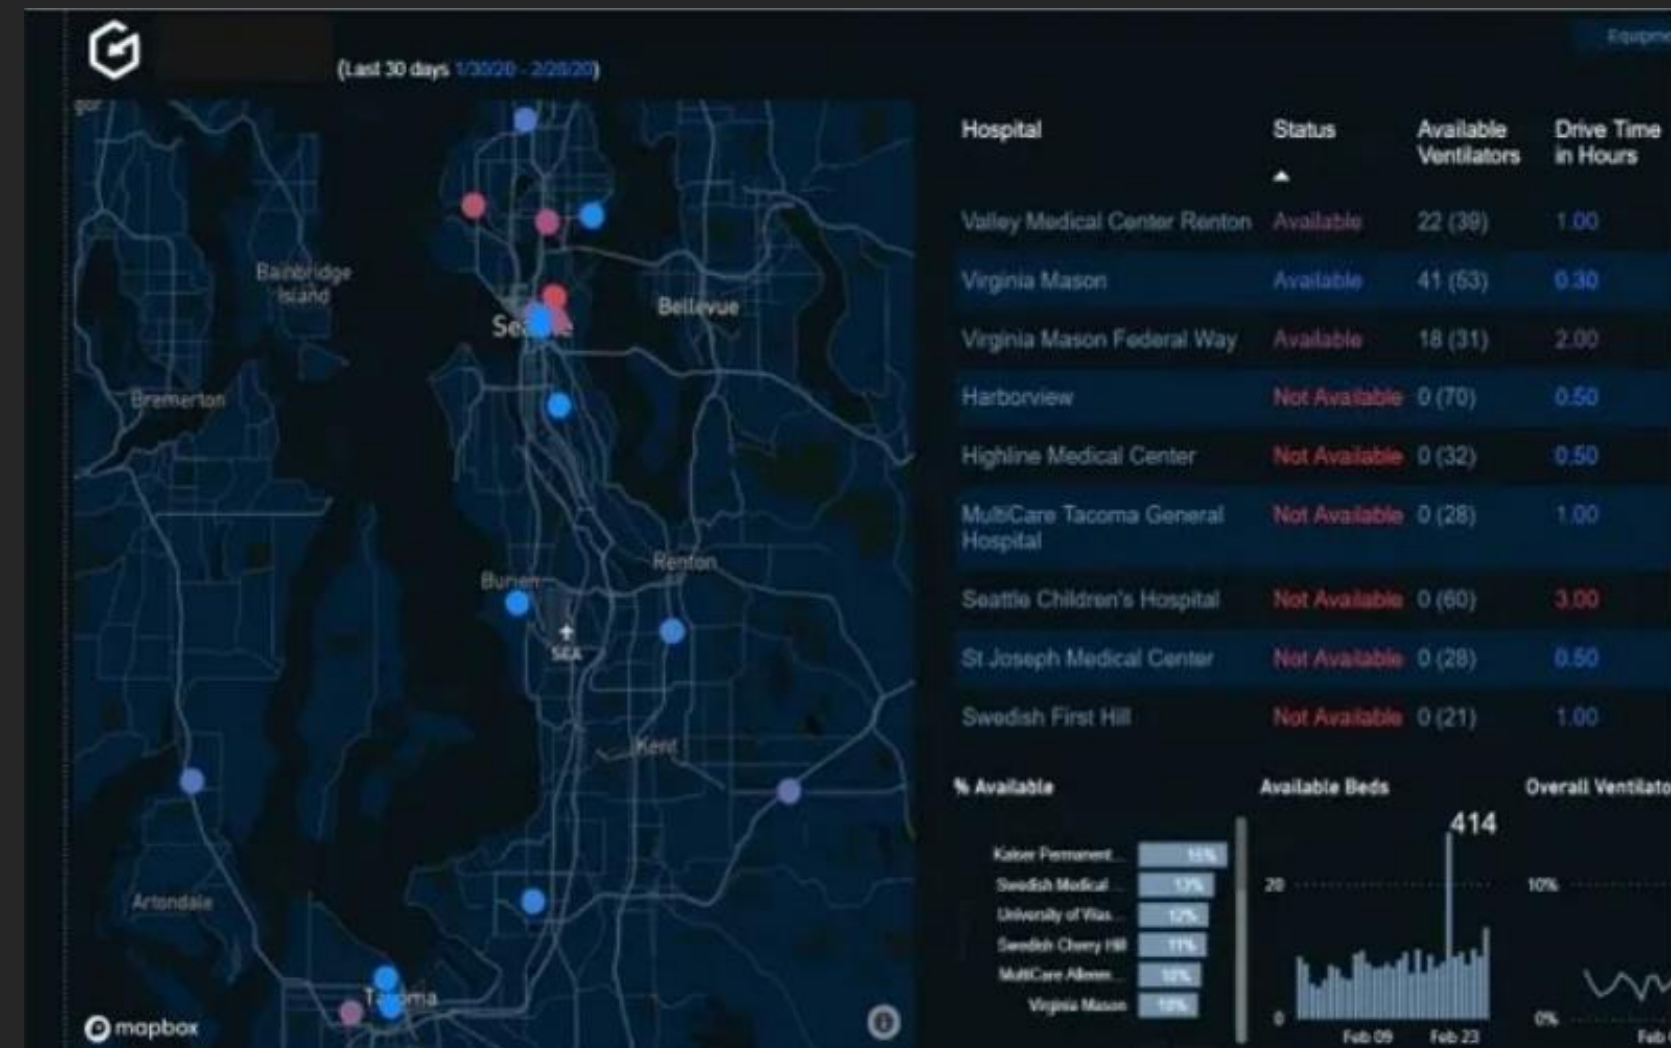

Work with our team to acquire the Pandemic Response IoT gateway. Place this device within range of your smart beds and ventilators. We'll set up the rest!

Doctors + Medical Professionals

Register to get access to the Pandemic Lifeline Dashboard and immediately view life saving resource availability

Once Connected

Utilize the dashboard to see which hospitals and medical facilities have access / availability for your patients.

Key Components

Proven Success

Pulling data from a variety of devices

Sending data and information securely to the cloud

Creating password and HIPPA-certified dashboards for remote monitoring

Data Visualizations

Comprehensive & intuitive dashboards for current & historical data

Relaying information in real-time for your team of certified medical professionals

Creating a data driven environment where leaders feel confident in their knowledge

Custom Alerts

Full customized alerting system that operates in real-time

Alerts via SMS text, email, or phone notifications

Driven by metrics defined by medical professionals
