RUSTIC

rustic timbercraft

Our Rustic Timber Collection is an instant classic. This millwork line utilizes the technologies of today to build the 'log and timber' wood products that have been in architecture for centuries. Because our products are not kiln dried, each item in our Rustic Collection is 100% unique and will contain the natural variations that the wood species offers. Each piece contains unique colors, grains, textures, knots, sapwood and heartwood content; and with unlimited custom options, you can create a truly one of a kind piece. Our Rustic Collection truly stands out from the rest.

- AUTHENTIC CRAFTSMANSHIP
- CRAFTED FROM AMERICAN WOODS
- MADE IN THE USA

Our exclusive online design tool allows you to create endless product options. If you can dream it, we can make it. Add your personality with a limitless range of shapes, sizes, and thicknesses. When off-the-shelf products just won't do, our leading product line is the perfect solution. Project-perfect products at off-the-shelf pricing.

- MADE TO YOUR SPECIFICATIONS
- ADDS INSTANT CURB APPEAL VALUE
- MADE WITH DURABLE WOODS
- VARIETY OF STYLES AVAILABLE

Advanced woodworking techniques allow us to create one-of-a-kind products that would be difficult for traditional carpenters to build. Our timber collection offers timeless character fulfilling your desire for beauty and longevity for your home. Improve curb appeal, as our wood is truly distinctive and can be ordered in any style to compliment every home.

BRACKETS

Rustic timber brackets are ideal for adding visual appeal to the exterior style of your house. Architects, contractors, remodelers, and homeowners choose rustic timber for it's distinctive qualities that give structures a special, signature look.

GENERAL KNOWLEDGE

Aesthetically, there is no substitute for the natural beauty of real wood. Comprised of crisp rich tones, wood evokes an organic, natural feel while embodying strength and longevity. Wood has long served as a traditional building material because it provides a rich warmth and sophistication that other materials just can't achieve. Wood cuts easily and all the products can be installed using standard woodworking tools. Our solid wood construction is extremely durable, offering a valuable life-long accent to your home. We handpick premium quality timber and have unparalleled woodwork expertise and technology for precision manufacturing and quality craftsmanship.

TEXTURE

Our Rustic Timber line consists of smooth and rough sawn textured surfaces. They both bear an authentic rustic look with signature sawmill character. Because our products are not kiln dried, each item in our Rustic Timber Collection is 100% unique and will contain the natural variations that the wood species offers. Your wood will contain unique colors, grains, textures, knots, sapwood & heartwood content and even natural checking, splitting & cracks. These natural variations are what make our Rustic Collection stand out from the rest.

WHY WOOD?

- Wood is the only 100% renewable resource in the manufacturing of building materials.
- Wood is the only naturally recyclable and biodegradable building material.
- Wood has the lowest environmental impact compared to other building products such as steel, concrete, tile, vinyl siding, fiber cement siding, and stucco.
- Wood products produce less solid waste – both in manufacturing of the products and at construction sites. There is virtually no waste in manufacturing wood products.
- Wood is a versatile raw material.
- Wood can be used to substitute for materials that require larger amounts of fossil fuels to be produced.
- Wood can be used to substitute for materials that require larger amounts of fossil fuels to be produced.

installation tips

MOISTURE

The large timber your items are made from have been air dried for the past 6-12 months depending on the overall thickness of the timber. Air dried timber products need special care during initial storage and installation. Rapid climate changes such as a dramatic change in temperature or humidity can lead to the wood checking or splitting. Also, because all timber products are made to order, they are cut and milled 24-48 hours before being shipped to you. When timber is cut, it is critical to allow the inner wood to adjust as slow as possible to avoid unnecessary checking, cracking & splitting.

Therefore, we recommend your timber product be acclimated slowly into its new climate and home by following these directions. The thicker the timber, the greater the time we recommend allowing it to acclimate.

1. Keep your product inside the box and bag it arrived in and place it in a dry storage area (garage/shop) for 24 - 48 hours.
2. Remove product from the box and cut 2-3, 1" holes into the plastic. Allow bagged product to acclimate in this state for 48-72 hours.
3. If you are going to be installing your product in a climate controlled environment (AC/Furnace) then we recommend repeating steps 1 & 2, this time in the controlled environment the product will be installed in.

NOTE: Subsequent dimensional changes are, and always have been, an inherent natural property of softwood timber. Expansion and contraction is natural.

FINISHING

Softwood species have outstanding dimensional stability and fine texture, allowing them to accept and retain many different types of finishes. The choice of an exterior wood finish for real wood depends upon the desired appearance and the degree of protection required. However, wood's finishing characteristics cannot compensate for products that are unsuitable, of inferior quality, or improperly applied. Finishes perform best when the coating is applied to all surfaces prior to installation.

We recommend finishing our rustic timber with deep penetrating premium oil-based stains that are water repellent and mildew resistant. Semi-transparent, semisolid and bleaching oils are recommended depending on the customer's preference. Latex, acrylic and oil-based paints can also be applied to the timber. Paint provides protection and color but will conceal some of the wood's characteristics.
