STATE OF THE ART FACILITIES
FEATURING TWO LASER SIMULATORS

Announcing our addition of a second Judgmental and Marksmanship Laser Simulator Range.

They are by far the best training tools to train in Use of Force, Concealed Carry, Personal Protection, Law Enforcement, and Security Officer, Marksmanship and Judgmental Response Qualification.

Participate using realistically sized, and weighted, Glock Laser Pistols in real time with life sized, video scenarios projected on 110” screens, that can branch to different outcomes either by a trainer’s input or by the trainee hitting a zone on a character. It also allows the Shooter and instructor to immediately review the scenario and shot placement at the end of the drill.

The Range is a course of fire, qualification training software, that allows us to recreate an indoor range with timed, turning targets (B27, Hostage Taking, etc.) as well as specific courses of fire (NC PPSB Day Fire, Night Fire, Concealed Carry, etc.) for up to 4 shooters simultaneously.

Real Time, our newest system allows us to create live action video scenarios allowing the student to interact with a live individual using real time de-escalation and threat response strategies. We can use videos taken from your facility, indoors or outdoors, to create interactive training scenarios specific to your needs.
