Cross Connection and Inter-Connection Control

I certify that I will not connect the plumbing for the public water supply to any plumbing for any other water supply. This includes wells, cisterns, pools and reservoirs, even though a cut off valve may be installed between the public water supply and other source.

Also, I will not create any cross connections whereby contaminated water or other liquid may be back siphoned into the public water supply. Proper safety devices will be used at all possible cross connection sources.

I understand the above is required by Tennessee Code Annotated and public water supply rules. I further understand that my premises will be inspected for possible hazards before meter is installed and that I will take any corrective action required.
