#### About the Modes of Operation

The app is by default communicating with our servers online, in a semi-regular basis. e.g. checking for updates.

In some regions the cost of online data access is high or not available based on carrier coverage.

In these cases the Cached Record mode is preferred. For this mode to work , you first must be online to enable the app and to download your current records.

In the Cached Record mode notifications will not be available, and you may be required to switch to online mode to fetch your records for access to some venues such as airline travel.

Set your switch for track and trace options

## *My***Vax** Track & Trace Terms and Conditions Screen

TERMS & CONDITIONS

By accepting the terms and conditions as

3 There is no requirements to turn this on. It is your choice. When activated the GPS location of your phone and optional LE Bluetooth trace information is sent to a server for macro data analysis of which citizens are vaccinated and where they are.

3 The data is scrubbed and anonymized when made available to public heath officials. This data is used to help control the spread of pathogens and to measure vaccination efficacy outlined in the link below. I agree to have my phone tracked via GPS and to invoke Bluetooth tracing of my movements to help with eradication of COVID-19. I further understand that I may revoke this permission at any time by using the switch button here or on the front of this app. **I AGREE**
