

GD1200S ENTRY SYSTEM

GD Entry's Touch Screen Telephone Entry System comes pre-configured and tested, allowing for easy deployment. With a distributed configuration, no need for high voltage at the front door is needed, simply a single CAT5/6 cable and 18/2 is all that is required.

Our system supports traditional residents while simultaneously allowing residents with smart phones to use our one-way video calling applications for free. Residents can receive calls from the system over landlines, cell phones, and video applications or any mix of the bunch. The system will automatically call them on what is available first, with no need to be worried about defining a method for each tenant.

We allow for ease of configuration anywhere you are in the world with a secure connection when the system is connected to the internet. With 24/7 health monitoring included for the life of the system, you never have to worry about the status of your system. With no subscription fees required, once you buy, you own this system and it will continue to run and operate for its lifetime!

Features

- Vandal-resistant, IR-based touch screen with IR/UV filter screen protector
