each \$99.95

MEDESY COMELLA'S FORCEPS

The only forcep specially designed for the extraction of root fragments from the lower horizontal embedded eighth molars

After parting the crown using a bur, the tooth is divided into two parts: mesial and distal. The mesial part is accessible and easy to remove; the distal part can instead give some problems because:

- Positioning in the bone
- Retentive root shape
- Patient comfort (timing)

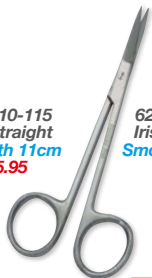

The root elevators and other tools currently used can be dangerous and cause damage to vessels and nerves, particularly the close lingual nerve. Comella's forcep have a **secure, precise and steady** grip ensuring the integrity of the surrounding tissue
