DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

- NO SPLATTER** - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our **NEW 60° turn reciprocating** prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.
- NO HEAT** - Our **NEW 60° turn reciprocating** prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.
- EFFECTIVE** - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.
- FASTER** - Thanks to innovatively designed **NEW 60° turn reciprocating** prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.
- SAFER** - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our **NEW 60° turn reciprocating** prophy angles provide a much safer and pain-free prophylaxis treatment.

WARNING:

USE OF THESE 60° TURN RECIPROCATING PROPHY ANGLES IS EXTREMELY ADDICTIVE
Once you've tried them, you will never want to use any other prophy angles again

After scratching our heads, we've created our interdental brushes with a few 'ez' changes:

- 1 We've reduced the size of our handle to a smaller, more practical design – this uses up to 50% less plastic than other leading brands.
- 2 Instead of using new plastic, we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.
- 3 Unlike other brands who package interdental brushes in unnecessary plastic boxes and bags, we use cardboard which is 100% plastic free and recyclable.

Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

We have however created a more environmentally friendly air-water syringe tip by making a few changes.

1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from other manufacturing processes.

2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

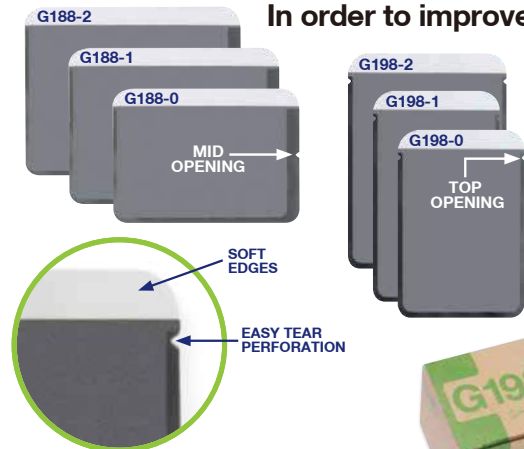

- Directly interchangeable with American type syringe tips (long), or European syringes which have been converted to use American type syringe tips (short)
- Made from 100% recycled plastic
- No sharp edges for patient comfort
- Unique quad air core design to ensure dry air
- Environmentally friendly packaging

Greenline biodegradable PSP barrier envelopes

In order to improve on an already great product and in an effort to reduce waste we've:

1 Made our product from oxo-biodegradable plastic, which means the material will breakdown more easily than conventional plastics.

2 Removed the plastic packaging and supplied them in a 100% recyclable paper box, which conserves natural resources like timber and water.

Greenline micro applicators mini

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

1 We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to competitive products.

2 Instead of new plastic we used 100% recycled plastic. This recycled plastic is made using waste materials from other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Greenline micro applicator tips

Our most environmentally friendly micro applicators:

1 By using these tips you save 80% of the plastic that you would normally use in the handle of a standard micro applicator.

2 An autoclavable handle saves plastic. Clean it, autoclave it and re-use it. Simple and effective.

3 100% recyclable environmentally friendlier box. Recycling means preventing pollution by reducing the need to collect new raw materials.

4 Instead of new plastic we use 100% recycled plastic. The recycled plastic is made using waste materials from other manufacturing processes.
