DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

**NO SPLATTER** - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our NEW 60° turn reciprocating prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.

**NO HEAT** - Our NEW 60° turn reciprocating prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.

**EFFECTIVE** - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.

**FASTER** - Thanks to innovatively designed NEW 60° turn reciprocating prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.

**SAFER** - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our NEW 60° turn reciprocating prophy angles provide a much safer and pain-free prophylaxis treatment.

WARNING:

USE OF THESE 60° TURN RECIPROCATING PROPHY ANGLES IS EXTREMELY ADDICTIVE

Once you've tried them, you will never want to use any other prophy angles again

## HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Hollow Handle Micro Applicators (Length 100 mm, dia 3 mm handles)	100 pcs box	10 x 100 pcs box
HH-901 Regular (dia. 2.5 mm) Light Green .....	\$4.95	\$30.00
HH-902 Fine (dia. 2 mm) Medium Green .....	\$4.95	\$30.00
HH-903 Ultra Fine (dia. 1.5 mm) Dark Green ....	\$4.95	\$30.00

**1** 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.

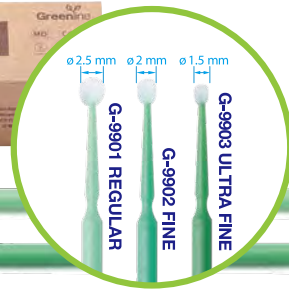

**2** Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.

**3** No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

# Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

We have however created a more environmentally friendly air-water syringe tip by making a few changes.

- 1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from other manufacturing processes.
- 2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

- Directly interchangeable with American type syringe tips (long), or European syringes which have been converted to use American type syringe tips (short)
- Made from 100% recycled plastic
- No sharp edges for patient comfort
- Unique quad air core design to ensure dry air
- Environmentally friendly packaging

After scratching our heads, we've created our interdental brushes with a few 'ez' changes:

- 1 We've reduced the size of our handle to a smaller, more practical design – this uses up to 50% less plastic than other leading brands.
- 2 Instead of using new plastic, we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.
- 3 Unlike other brands who package interdental brushes in unnecessary plastic boxes and bags, we use cardboard which is 100% plastic free and recyclable.

The efficiently cutting bur blades enable pressureless, minimally invasive preparation. The long, slender neck guarantees good visibility to the access cavity. Endoburs with L34 are particularly suitable for preparing under a microscope to ensure an optimum view of deeper areas of the pulp chamber, and showing the anatomy of the cavity chamber floor. This facilitates minimally invasive opening of root canal orifices and exposure of obliterated canals.

### CROWN CUTTERS FG / FGL

#### User recommendations:

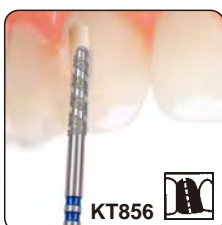

When cutting crowns and bridges the following should be observed:

1. The veneer should first be separated with a diamond instrument.
2. Crown material reduction of the crown material layer, which means starting the procedure from top to bottom end several times.

↻ opt. 120'000 - 160'000 rpm  
Contact pressure: 0.5 N

### KT856 / KT881 KT CERAMIC CROWN CUTTERS DIAMOND FG

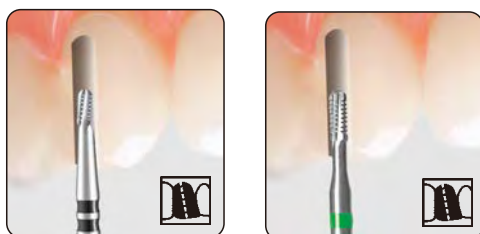

For cutting all-ceramic restorations such as zirconium oxide and other all-ceramic materials. The exceptional stability of the special diamond grit provides for a long service life of the **KT** diamond instruments. The multilayer electroplated bond prevents the diamond grit from loosening prematurely. This results in an optimal removal rate with low vibrations when cutting all-ceramic materials.

The crown cutter **KT856** is to be placed at an angle of 45°. To remove an all-ceramic restoration, the restoration must be slit along its axial wall towards the centre of the occlusal surface or the incisal edge. The restoration is then bent open with a suitable instrument (lever), causing it to fracture. The **KT881** is suitable for grinding off fragment residues. Speed ideally 160,000 rpm, contact pressure < 2 N

Specially coordinated for the separation of non-precious metal and gold crowns with an improved cutting capacity and service life compared with conventional crown cutters. The special compact blade configuration provides the **C35L** with controlled cutting behaviour and high cutting efficiency due to the optimally adapted tip-transversing blade with cross-cut. Use in the red contra-angle at 160,000 rpm; can also be used in a turbine.

### C34LT METAL CROWN CUTTERS TUNGSTEN CARBIDE FGL

New generation of crown cutters with **TiN** high-performance coating for optimal chip removal and smooth, low-vibration operation. The tothing with crosscut and overhead cutting edge ensures maximum cutting performance as well as a long service life, even when cutting non-precious metal crowns. The crown cutter **C34LTFG012** is to be placed at an angle of 45°. The crown cutter **C34LTFG016** can be used both at a 45° angle as well as flat. Notes on use: 1. cut open the ceramic veneer with a diamond instrument. 2. cut the metal framework with the crown cutter optimal speed 160,000 rpm, contact pressure 0.5 N

MEDESY COMELLA'S FORCEPS

The only forcep specially designed for the extraction of root fragments from the lower horizontal embedded eighth molars  
After parting the crown using a bur, the tooth is divided into two parts: mesial and distal  
The mesial part is accessible and easy to remove; the distal part can instead give some problems because:

- Positioning in the bone
- Retentive root shape
- Patient comfort (timing)

The root elevators and other tools currently used can be dangerous and cause damage to vessels and nerves, particularly the close lingual nerve  
Comella's forcep have a **secure, precise and steady** grip ensuring the integrity of the surrounding tissue
