**EDvantage™**  
Educate - Empower - Evolve

# BEGIN TO BEGIN

## Description

To stand out in this competitive world, a student is required to learn and master many subjects. But often we ignore the potential and power of life skills that can enhance their overall performance to uncover the best version of themselves. These life skills are helpful not just in schools and/or colleges, but students will definitely carry forward these learning and apply it to build their dream career and life. But in order to carve out these life skills, a student needs an environment which is conducive to their growth. A place where not only their individual strengths and capabilities are brought to light but also their fears and weaknesses are acknowledged and worked upon, so it propels their dreams rather than hold them back. Our aim with EDvantage is to provide world class life skills to our future generation to not only educate them but also empower them and help them Evolve.

We believe in a creating a thriving environment for children where they will be masterminding with some of the most incredible and interesting personalities. The students will get guidance on new and emerging career trends. When children are exchanging ideas with some of the best minds around, they are bound to find themselves in an explosion of self-discovery. In our classes you are surrounded by a tribe of fellow learners who have one common goal and that is to learn and grow and live the life they have envisioned for themselves.

Our student programs provides a holistic approach to education that enhances and boosts young minds for comprehensive performance. To complement the world class academics provided by schools, our program focuses on teaching students the skills that are required to thrive in the real world. Our uniquely designed programs will empower children to make life and career choices that are aligned with who they are as a person.

Unconventional teaching strategies and learning tools that focuses on concepts like growth mindset, teamwork, communication, memory power, importance of listening, adapting to change, body language, time management, social development and self-esteem will help children propel their journey from who they are to who they want to be.

## What you will learn

Our Signature Program has a unique road-map where we start off by deciphering the child's unique personality and then help them create powerful visions for their future based on curriculum that encourages independent thinking. Learning is customized to the child's individual vision for WHO they aspire to be and we believe this approach helps in putting their authentic selves over the pressures of who they are expected to be.

Our curriculum follows a unique road-map with 5 distinctive milestones.

1. We will help students decipher their personality. Here students do a self-assessment of their goals and we will then help shape and create powerful visions for the future.
2. We will help students become independent thinkers by introduce them to a revolutionary new concept of "growth mindset"
3. The best of the best in the industry will be guiding students on not only already established career options but also new and emerging career trends that are unheard of in the hills
4. Our experts will then design and customize training based on each student's individual strengths, interests and personality traits so that they can evolve from who they are to who they want to be.
5. With one common goal to "live the best version of yourself", we will help students create their own unique brand that will bring to light their own unique Edge which sets them apart from the crowd.

Remember "You will never know your full potential unless you push yourself to find it. You are more than you realize".

So what's holding you back? EDvantage is ready to uncover your potential.
