# We give our profits to the planet.

We created a purpose trust to lock in our core values, including our commitment to save our home planet. Every dollar that doesn't go back into our business goes to work protecting and restoring the Earth.

Alaska's Tongass National Forest is home to the world's largest remaining old-growth coastal temperate rainforest. Amy Gulick

# Eight days a week

## We're in business to save our home planet.

This is the challenge Yvon Chouinard gave Patagonia when he updated our reason for being in 2018 for the first time in years. It's a lofty goal, and one that shapes every item of clothing, every donation, every activist campaign. It's also one we'll never reach on our own.

Patagonia Group Sales is one way we get professionals all over the world involved in solving our intertwined social and environmental crisis. Through the program, like-minded companies can outfit their teams with products that not only offer top-tier performance but also are built using recycled fabrics and designed for repairability, to reduce the need for virgin materials and to extend their life span as much as possible. Many are made in Fair Trade Certified™ factories, to support the workers who make them, and many are also made with fibers like organic cotton or hemp, which are grown with lower environmental impacts than conventional crops.

We also believe that a product's life span shouldn't be limited to business hours. So, choose the best gear for your team—from outerwear to warm-yet-wicking baselayers to our tough-as-nails Workwear line—knowing it will keep them warm, dry and comfortable through the workweek and on any out-of-office trips through the weekend.

You're proud of your employees. We're proud to help them enjoy the planet as passionately as they're working to save it, during business hours and beyond.

To learn more about Patagonia Group Sales, visit our website at [Patagonia.com/group-sales](https://Patagonia.com/group-sales) or contact us directly at [800-470-7458](tel:800-470-7458) with any questions.

# Logos are back

## Plus a few new options for branding that keep our logo gear in play longer.

Each day at Patagonia, we look for ways to use our business to save our home planet, and that starts with creating goods that last a really, really long time.

When we realized that adding an additional nonremovable logo to a garment could significantly shorten its life span, we made the difficult choice to stop approving additional logos altogether, until we could figure out a way to do so without dooming our gear to an early grave in a landfill.

That's why we're excited to announce that we're once again authorizing custom third-party logos on our gear. This time, however, we're doing it a little differently.

The first option—and our favorite—is to forgo added logos on your Patagonia gear altogether. Instead, we suggest supplementing your gear with useful branded items such as lanyards, name tags and water bottles for your crew to distinguish themselves as part of your company.

We do understand a logo can be a powerful thing, so another option is to work with a third-party decoration facility to apply removable branding such as a zipper pull, luggage tags or woven hem labels. All are extremely versatile, easy to remove or replace, and can even be reapplied to another jacket or pack if a team member moves on.

And then there's the classic embroidered logo. These have long been considered permanent, meaning even a tiny logo could reduce the life span of a garment in a big way. It is now possible to effectively remove embroidered logos from most garments and add a new logo if needed. Better yet, skip the logo and preserve the opportunity to keep your gear in use longer.

But scrubbing and adding new logos to help keep gear in play only solves half the problem. The other half: finding a way to recapture logo'd garments that people no longer want at all. So, we figured out a way to add a patch over existing corporate logos, which will enable us to take them back and then resell them through our Worn Wear program. Even after your employees have outgrown their Nano Puff® jackets or Better Sweater® quarter-zips, someone else will be able to continue enjoying those garments for years to come.

Our Group Sales program is small, and we accept applications on a case-by-case basis, but please reach out to discuss options for bringing our gear to your team.

Thank you for being a Patagonia customer and advocate. But, most of all, thank you for giving a damn about saving our home planet.

World Central Kitchen contractors build boxes to hold fresh produce and shelf-stable items. This nongovernmental organization provides meals to people impacted by crises, and in this case, the food will go to Navajo Elders and families who've been hit hard by COVID-19. ## Customer Testimonials

“

“B Lab works with Patagonia because we believe in partnerships with companies that are using the power of their business to build a more inclusive economy and healthier planet.”

**Andy Fyfe, Director of Equitable Growth, B Lab**

“

“World Central Kitchen’s teams often activate in dangerous and distant locations, and we need to keep our people cool and protected from the sun when surveying a remote farm, or warm and dry when delivering food in a hurricane. Patagonia gear does all that, so whether we’re planning a complicated mission in the face of much uncertainty or a trip on a partner fisher’s new boat, one thing we can count on is our teams will be safe, comfortable and well-equipped to handle whatever nature throws at them.”

**Erich Broksas, Chief Operating Officer, World Central Kitchen**

# No business on a dead planet

## Being a 1% for the Planet® member and Certified B Corp.

Why did Yvon Chouinard update our official purpose statement to “We’re in business to save our home planet”? That’s because we believe business can play a crucial role in stopping the myriad threats facing life on Earth, but only if those businesses take concrete action toward protecting the well-being of our planet and its denizens. We also believe such efforts mustn’t come at the cost of success. In fact, history has proven they can even strengthen a company’s bottom line ... and help save the planet in the process.

In 1985, Patagonia began pledging 1 percent of our sales to the preservation and restoration of our natural environment; in 2002, Chouinard and Craig Mathews, owner of Blue Ribbon Flies, founded 1% for the Planet, a nonprofit that encourages other businesses to follow their example. The organization now has over 6,000 members—from companies like New Belgium Brewing to individuals like musician Jack Johnson—who’ve donated more than \$430 million to domestic and international grassroots environmental groups.

We took another more holistic step in December 2011 when we became a Certified B Corporation, and in January 2012 we formally registered as the first benefit corporation in the state of California. B Corp certification means our company’s overall environmental and social performance has been measured and independently verified by third-party company B Lab. Their evaluation goes beyond products or even the supply chain, encompassing a company’s operations, business model, community impact, materials, charitable donations, employee benefits and—as Chouinard noted—even its purpose statement.

On September 14, 2022, Patagonia announced a new ownership model. “We’re making Earth our only shareholder,” said founder Yvon Chouinard. Now, every dollar that is not reinvested into Patagonia will be distributed as dividends to protect the planet. **Nancy Pastor**

## Stories We Wear

“It’s really becoming more patches than jacket.”

by Anne Gilbert Chase

I spend so much time in the mountains that I really know what my kit is. If I know something works, I’m gonna stick with it because it’s one less thing I have to worry about. I can focus on everything else that is more important.

This Micro Puff® Jacket came to me as a sales sample in 2017. As ambassadors, we get samples ahead of time to make sure that the gear is what it needs to be. I thought it looked like a cool jacket with that bright red color and the blue zipper. I wore it a little bit on day trips, and it kept me warm, but it was also breathable.

Now, it’s probably the piece that I’ve taken on the most trips—to Pakistan and Nepal and India and Alaska and Canada. I took it on the Slovak Direct, which is a big route on the south face of Denali that my partner and I climbed. We tried it the first time and got weathered off, and then we went back and did it the second time. I mean, Denali is almost 21,000 feet, and it’s cold. Normally, you would bring the Grade VII Jacket or something quite large, but I decided to bring the Micro Puff. I shivered pretty much the entire time. But looking back on it, I’m like, “Wow, I can’t believe I actually climbed that thing with not much of a jacket.”

I sometimes literally live in this Micro Puff. In Alaska, I didn’t take it off for the three days that we spent on the wall. Since I’ve had it, I’ve probably washed it maybe four times. I air it out instead. But I definitely pay attention to how I pack it. I try not to put it next to cams or pins or sharp things, and I don’t strap it to the outside of a pack. I don’t want to add any more stress to the jacket than what I already put on it. That it’s maintained for all these years is awesome.

I’ve done all the repairs, which are pretty minor—rips from climbing and brushing up against the rock. Patches work great for that. Last fall in Nepal, I spent maybe an hour putting more on it. It’s really becoming more patches than jacket.

With certain pieces—this being one—every time I see a photo of myself in it, memories come back of that climb or trip. Those trips, especially when they’re successful and you’ve had an awesome climb, it’s such a huge feeling. But it goes away so quickly. That jacket brings me right back to awesome memories. I’ll wear that jacket until it literally falls apart. I just can’t let it go. It’s like a security blanket.

Anne Gilbert Chase takes her Micro Puff® Jacket on its first trip to Alaska. Jason Thompson

Eddie Taylor's shopping mantra is simple: "I already have it. So why get a new one?" **James Lucas**

## Stories We Wear

“Why use more materials when you already have something?”

*by Eddie Taylor*

I've always been raised to buy what you need and don't buy any more than that. I didn't grow up with a lot of brand-name things, and when I got into climbing, I just kind of wore what I had and didn't buy any fancy clothes. But friends told me, "The Patagonia stuff—if you buy it once, you don't need to ever buy it again because if it gets broken, they'll repair it. And they put a lot of time and research into everything they do."

I ended up buying one thing, the R1® Hoody, in maybe 2014. It was the first piece I bought of any brand-name clothing—climbing or not climbing. The first four years I had it, it was the only thing I climbed in. It was warm and light. I wash it when it smells and then wear it a lot. I don't do anything special to care for it. The idea that you can buy one thing and it should last you a much longer time is the reason why I started using and buying Patagonia products.

I did my first big wall in that R1, which was Mount Watkins in Yosemite. I had it on for Bugaboo Spire. I brought it when I went to South America for the first time and climbed Aconcagua. It got really, really ripped when we were doing a linkup in Castle Valley in Utah. We climbed Fine Jade, the Kor-Ingalls Route and Honeymoon Chimney. I pulled my phone out to take a picture, and when I went to put it back in, I saw the zipper had broken because I could barely fit in this chimney. I had been flying up and down it to the point where I broke the zipper. Worn Wear fixed it twice for me, and it's been going strong ever since.

I have new R1s, but this one fits better and I like the color. I'm not really that sentimental or attached to things. But at the same time, if I already have something, there's no point getting something new. Why use more materials when you already have something?

# The skeleton in our closet

A not-so-spooky story about recycled bags.

Our Black Hole® duffels have been a lot of places since they were first released in the 1990s. They've weathered the snowiest mountains, the thickest jungles, the hottest deserts and the most chaotic city streets, traveling on all manner of air, water, land and animal transport with a sheeny flair.

But that iconic, glossy exterior is also the bag's dirtiest secret.

The material in question is TPU, short for thermoplastic polyurethane, and it's this flexible plastic coating that makes Black Hole fabric so resistant to water, abrasion and general abuse. It's not the main ingredient—think weatherproof paint applied to an already sturdy house—yet it makes up nearly half the fabric's weight. And, until recently, there was no recycled alternative. "It was that one skeleton in the closet," says equipment designer Evan Daniel.

We've been using recycled materials for the body fabric, webbing and daisy-chain loops of our Black Hole bags since 2018 and had been considering similar options for TPU since 2016. We knew the material was out there and knew it could repurpose a lot of waste: For every 1,000 pounds of virgin TPU created, 75

pounds are thrown out. But we were less certain if we could make the swap and preserve the renowned Black Hole sturdiness.

"Everything was telling us not to do recycled TPU," Daniel says. "Doing the right thing often causes headaches later."

So, we started slowly. We experimented on the new material in the lab. We took one duffel on climbing trips in Colorado and California, and then chucked it out of a bush plane onto an Alaskan glacier. With each test, we made tweaks and adjustments until we were sure the recycled fabric—which has a matte finish instead of the classic gloss—matched its predecessor's unwavering durability.

"There's no 'blue bin' for recycled TPU," Daniel says. "And when you're dealing with trash, there's lots of things you can't control. It's like a puzzle to solve."

Solve we did. We began using recycled TPU for select Black Hole bags in Fall 2022—an industry first. For Spring 2024, we're proud to say we've expanded it to

all Black Hole duffels, and when we update our rolling duffels in Fall 2024, the entire line will be made with recycled TPU.

The new Black Hole bags may not have their iconic shine, but that's just fine with us. Traveling is a lot easier without a skeleton in your duffel.

# Daypacks & Slings

Our packs and slings feature intuitive organization and durable constructions for wherever you're bound. They're built from recycled polyester with a DWR (durable water repellent) coating made without PFCs to brush off light weather. Made in a Fair Trade Certified™ factory. Imported.

# Beanies & Hats

Our wide-ranging collection of beanies and hats are your do-it-all caps for checking the surf, biking around town or backpacking in the high country. They keep your noggin warm in cooler conditions and keep the sun out of your eyes on bluebird days. Made in a Fair Trade Certified™ factory. Imported.
