**3<sup>rd</sup> Visit** Final Insertion with little adjustments

or Try-In if changes are needed for final

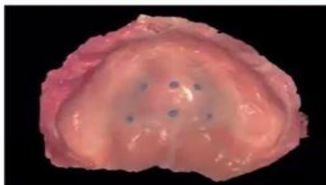

**4<sup>th</sup> Visit** Final Insertion if 3<sup>rd</sup> Visit needed reset

Dentist's markings on the models and bite rims.

## What about intra-oral scanning for full arch cases?

Scanning is possible but is still not perfect. Additional steps must be taken and case selection is critical.

Cases with tissue texture and landmarks will be easier to scan well. Must make sure to capture all anatomic landmarks.

Can use indelible pencil to help with stitching issues when scanning an arch with very few landmarks for reference.
