

Grafted Grevilleas that may be available for sale – see Open Day plant lists to see if these are available . Plant lists are posted one week prior to Open Days. Most of these are hard to source in nurseries

Grevilleas are usually grafted to provide plants that are more robust to a variety of conditions. Grevilleas from Western Australia or the Northern Territory, for example usually need to be grafted to survive in our heavier soils and increased humidity. Others are grafted because they are difficult to propagate by cuttings. Grevillea robusta is the usual understock for grafts, but at the Park we also use Carrington Cross, Bronze Rambler and barklyana hybrid.

Abracadabra This is a cross between G georgiana and G insignis, with the flowers more like georgiana. It flowers for several months beginning in Spring

Hard to source

Alex Pink More red than pink, this is a low growing grevillea that will spread a couple of metres. Its chief flowering period is from late summer through to autumn. Flowers are quite brilliant

Hard to source

Amber Blaze Ferny foliage and large orange flowers mainly in Autumn through to Spring. Highly bird attracting. Will spread 1-2 metres. Great on a standard

Hard to source

aurea A Northern Territory Grevillea that likes a hot spot in the garden. It flowers well in Sydney and tends to grow about 2 metre in cultivation. New growth has a red tinge. Coppery coloured buds open to golden yellow.

Hard to source

banyabba

A NSW species which has lovely red and lime green flowers on the ends of branches. It will take a semi shaded position but in full sun it will flower better. Expect the plant to grow to a metre or so high. Bird attracting

Hard to source

Big Foot

A mounding Grevillea with massive red flowers for most of the year. Great as a standard plant

Billy Bonkers

One of the most sought after Grevilleas on our open days . It grows only about a metre high but will spread about 2 metres. Always has plenty of metallic pink flowers on it

bipinnatifida

The parent of the famous Robyn Gordon and many other cultivars. It is a low growing plant with spectacular racemes that hang off the branches like grapes. We tend to sell the form with red/orange flowers. We find it does best away from the humidity of the coast although there are some good specimens in coastal gardens.

Hard to source

Bluey

A plant from the garden of Brian Weir (Vic). This plant forms a dense ground cover that spreads 2-3 metres. It has bright red toothbrush flowers which put on a truly spectacular display when in full bloom. Also great as a standard

Hard to source

Bonfire

Grows to 2.5 metres and has dark green fern like leaves and clusters of red spidery flowers. Likes a prune after flowering

Bulli Envy

A plant from the Park that has flowers reminiscent of G formosa. Usually sold as a standard but makes a great groundcover. Flowers begin a deep green and open to yellow – very impressive

Only available at the Park

Bush Lemons

For many the very best of the yellow flowering Grevilleas, again from Richard Tomkin. We keep the plants in the Park to about 2 x 2. Bush Lemons will flowers throughout the year.

Candelabra

Comes in a white or pink form. This is useful because of its narrow habit. Beautiful free flowering banksi type flowers

Carrington Cross

This is a hybrid of G rivularis and has flowers that are a beautiful mauve. It is a plant with stiff upright growth to about 2 metres or less

Hard to source

commutata

A highly desirable WA Grevillea usually about 2 metres high. It has green buds that open to pink and white flowers which are grouped on the ends of branches. The stamens keep the green tip. The narrow leaves have are silver underneath and most noticeable on a breezy day.

Hard to source

Cooroora
Cascade

A fast growing groundcover with large golden flowers during summer and autumn. This is a golden Lyre hybrid

crithmifolia

Either a small shrub or a groundcover. It has either white or pink flowers and has a dense habit. It is one of the outstanding perfumed grevilleas and requires little maintenance.

Hard to source

Crowning
Glory/Lassiter's
Gold

A spreading groundcover to 3 metres. A prolific flowerer especially in autumn. Flowers are large and golden. A great plant as a standard

dielsiana

One of the loveliest Grevillea flowers. We usually graft the red form but the orange yellow form is also desirable. It is prickly but is highly bird attracting. Flowers begin in autumn and often continue well into Spring

Hard to source

Droopy
Drawers

Flowers appear on the end of weeping branches. This excellent plant has stiff foliage and is a only small shrub

Elegance

A dense shrub that grows to 3 metres or a bit more, but which can be kept smaller by pruning. It flowers throughout the year and tolerates frost. We also graft the pink coloured variety at the Park. A real stunner

elongata

This WA Grevillea can spread a couple of metres and about 1.5 metres high. It is quite a robust plant that has red stems and which produces tons of white flowers that cover the bush and make a real statement

exul

One of the few species from New Caledonia. We graft 2 forms, the second has now been reclassified and is named rubingosa. It is a small tree but can be kept for many years to the size of a shrub. Dark green leaves are a great foil for the conspicuous creamy white flowers

Hard to source

Flamin Beauty A small plant that grows to just over a metre and few meters wide. The flowers at first sight are quite light but on closer inspection has flame tones

flexuosa Species from WA. A quick growing Grevillea that will provide you with a specimen plant within a couple of years. It will grow to 3 metres plus, but responds well to pruning. Flowers are a bright yellow/cream/white and literally cover the bush over several months

floripendula This plant from Victoria has quite a dense habit and unique flowers. Small holly like leaves provide the backdrop for pendulous flowers that hang from branches. Take a close look at the flowers and they are amazing.

Hard to source

georgiana One of the choicest flowers but unfortunately not often available. Grows to about 2 metres. Leaves are a bit spikey with reddish new growth

Hard to source

Golden Lyre

This plant will reach 1.5 -2 metres high and a bit wider., but doesn't mind being pruned. Masses of large yellow flowers appear throughout summer autumn and winter

granulifera

One from NSW that grows to about 1-1.5 metres. The foliage is notable for the silver underside of the leaves. Flowers are an attractive red and cream which appear over a prolonged period. Bird attracting
Rarely seen in nurseries

iaspicula

Rare and endangered species from NSW. Olde and Marriot describe this plant as " a charming plant with pale green, smooth leaves and prominent cream and red flowers displayed for most of the year"
Hard to source grafted plants

infundulibaris

From WA has interesting fan shaped leaves that is bronze when it first appears. Flowers are a fiery bright red. It is a low sprawling shrub
Hard to source

insignis

This is another magnificent WA species. Its waxy cream/pink flowers are highly stunning and contrast well with the grey green holly leaf foliage. It flowers over many months New leaves have attractive pink tips. It can grow to 3 metres plus by a few metres wide. Bird Attracting
Hard to source

intricta

This is an excellent bush for small birds because of its tangles foliage and beautiful cream flowers. It has several other fantastic features including red branches and sweet perfumed flowers. It is long lived

Ivory Whip

A small to medium spreading shrub which flowers for most of the year. Flowers are a unique ivory colour and provide a spectacular sight for much of the year

johnsonii

From Northern NSW. Comes in either orange or red. A truly magnificent plant that always draws attention at the Park when in flower. It is quick growing and is also beautiful when not in flower due to its long finely divided foliage.

Leah's Flame

This brilliant new cultivar is a seedling of Wendy Sunshine. It is a quick growing, low spreading plant with a bright red flowers which are present for most of the year. It copes better with the east coast humidity than Wendy Sunshine. It responds well to pruning which can be used if a more compact plant is desired. Also great as a standard
Only available at the Grevillea Park

leptobotrys

A truly beautiful species from WA. We graft this onto Carrington Cross . It is a low growing plant that will spread to 1- 1.5 metres. New growth is purple/red and is a real feature. It prefers full sun and is best planted at the front of a garden bed

Hard to source

leucopteris

An intriguing plant that holds its flowers on long branches which sit above the main foliage. It will flower several times a year and is always spectacular. Foliage is a beautiful greyish colour, finely divide. The shrub will grow to about 2 metres but the flowers spikes reach up beyond this

Hard to source

Lime and Soda

Another uniquely coloured hybrid from Richard Tomkin. The flowers on this prostrate plant are greenish yellow and are best in autumn and winter

Lollypops

A great smaller tropical Grevillea with bright pink flowers in abundance. Very popular

Metal Red

A new Grevillea with metallic red flowers that appear throughout the year. Will reach a 1.5 metres high and 2 metres wide. Interesting that this is a cross between 2 groundcovers – Bronze Rambler and banksi

Midas Touch

A taller Grevillea about 3 metres high and 2.5 wide. It has masses of large golden flowers reminiscent of its parent G juncifolia

nudiflora

We graft 2 forms – curly leaf and broad leaf. Both are reliable plants that provide an interesting foliage contrast. They form a dense ground cover. They also look great on a standard.

Orange WOW

One of the new breed of Grevilleas from Richard Tomkin. Large stunning iridescent flowers that have to be seen to be believed. It is a vigorous spreading plant but responds well to pruning if you don't have the space. It only reaches a height of a metre or so but can spread several metres

parvula

Attractive grevillea with rusty red new growth and orange-red flowers most of the year. Excellent long lived bird attractor. Grows 1-1.5 metres high
Previously known as G. victoriae var. leptoneura
Not usually available as a grafted plant

pateniloba

The foliage is probably the outstanding feature of this Grevillea - best described as zig zag. This is a tidy bush to about 1-1.5 metres. Flowers are quite a bright red and yellow.
Hard to source

pauciflora

One for the collector. This will grow 1- 1.5 metres.
Leaves are an attractive green/grey and these contrast brilliantly with the often many red and yellow flowers
Hard to source

pilosa

G pilosa grows to about 1 metre or thereabouts.
Flowers are deep red and appear on the bush during most months of the year. A nice feature are the blue/green branches which tend to arch down
Hard to source

plurijuga

One of the most asked for plants on our open days. G plurijuga is a low growing shrub that can reach up to a metre. Long prominent flowers stand upright on the bush and are purple/mauve/pink in colour. Foliage is a lovely blue green

quercifolia

A small grower with lovely purple flowers that stand up above the main foliage.
Hard to source

Red Passion

This plant has deep red banksi type flowers that stand upright on the plant. It is quite a compact grower to about 2 metres. It always draws comment from visitors during the Spring Open Days. At the Park we prune annually in October and this results in outstanding flowering the following year. One of the best banksi hybrids
Hard to source

Red Ripper

From Changers Green Nursery this plant is a real beauty. It grows to about 1.5 metres high and wide and has magnificent red flowers throughout the year

rivularis

Quite rare in the wild, this Grevillea is from NSW. It is quite low growing but will sprawl over several metres. The flowers are an attractive mauve and cream with green tips on the styles

Hard to source

Robert's Ripper

A plant from the garden of Robert Brown (Vic). A plant that will reach about a metre by a metre and a half. It has highly desirable purple/pink toothbrush flowers that have green tips on the stamens. It likes full sun. It is prickly but worth the space in your garden.

Hard to source

Royal Mantle Standard

Still the best ground cover on a stick, with its dense habit and lovely red flowers

rudis

A small growing plant with unusual hairy leaves. Flowers are displayed on branches that sit above the main foliage. It flowers over many months
Hard to source

Scarlett King

This has tight dense silver grey foliage and masses of vivid red toothbrush flowers. The plant will grow to about 1 metre high and a few metres wide

scortechini

One of the black flowered Grevilleas that is rare and endangered. Low growing and a real talking point
Hard to source

sheresii

This is a rare plant that advantage of taking a degree of shade. The flowers are greenish blue
Hard to source

Silver Sulfa

Another from Richard Tomkin. Free flowering mainly during summer and autumn, it will grown 2m x 2m. Flowers are massive

stenemora

Beautiful fine silver/grey foliage coupled with pink/orange flowers that hang from branches make this an impressive grevillea. Will grow in the 1.5 high metre range

Hard to source

subtiliflora

This beautiful grevillea is not often seen outside the Grevillea Park. It grows to about 2.5 metres and is a sight to behold when in full bloom. The flowers are white and hang from branches and are delicately perfumed

Hard to source

superba

Flowers similar to pluriguga. An upright plant with lovely long mauve/ pink/cream flowers

Hard to source

synapheae

A popular dense small growing grevillea that is covered with flowers in spring. One to be planted in the front of a garden or rockery

synapheae
subsp minyulo

Flowers similar to synapheae subsp synapheae but the habit and foliage is more open and sprawling

Hard to source

tenuiloba

This is a brilliant plant. It's a spreading shrub with bright orange toothbrush flowers throughout Spring and into summer. A great rockery plant or better still try to find one on a standard

Hard to source

tetragonaloba

This is a lovely grevillea with dense fine foliage and red flowers. Bird attracting. Great as either a specimen or hedging plant.

Hard to source

trachythea

This Grevillea has creamy white flowers mainly in Spring and summer. The flowers are scented and the foliage is attractive .

Hard to source

venusta

This is a larger growing Grevillea. In the garden it will grow to 3 plus metres but can be pruned to keep it smaller. It has one of the most uniquely coloured flowers. The combination of orange red green and black stamens is superb

vestita

We graft the superior and harder to source pink flowered vestita at the Park. The foliage is a beautiful grey and the flowers scented.

Hard to source

Wendy's
Sunshine

A small growing plant with divided grey foliage and vivid red flowers that appear on the ends of branches throughout the year

wickhamii

A tall growing Grevillea from the Kimberly region. It need a hot spot in the garden and will reward you with bright red flowers that hang conspicuously from the branches and light up the garden.

Hard to source

wilkinsonii

A rare and endangered Grevillea from NSW. It is a neat bush that only grows to 1.5 metres and has beautiful mauve flowers

Hard to source
