Master Plan Presentation

Thursday Jan 30, 2020
6:00 pm
Indian Hills Community Center

The Indian Hills Water District would like to present our newly updated Master Plan.

In 2019, the District hired an engineering firm to evaluate the current treatment and distribution systems and its water storage to determine the current condition and make recommendations on improvements needed and where expansion is possible. The District was also interested in receiving direction on treatments for high nitrate issues, fire hydrant locations, SCADA improvements and expansion, and leak detection monitoring.

The year round system was installed in the mid 1970's and the most recent Master Plan was dated 1972.

We hope that you will attend this presentation to learn more about the information we received in the new Master Plan.
