

NAD+

Nicotinamide Adenine Dinucleotide

NAD, derived from vitamin B3 (Niacin), is a coenzyme naturally produced in our bodies. High levels of production ensure we reap the incredible NAD benefits for our health. The "+" in NAD+ means it's in an oxidized form. Our body makes it by synthesizing elements, called NAD precursors, into NAD. With NAD+ IV therapy, this amazing coenzyme is infused into the body with IV fluids from a drip bag. As we age, our bodies generate less and less NAD+. This is one reason we begin to experience the effects of aging and become more prone to age-related illness. Our bodies gradually perform less effectively than they once did – from our mental capacity to our physical performance. One of our most innovative preventative services that helps promote improved cognition, healthy aging, general wellness, and enhanced performance is our NAD+ intravenous (IV) infusion. Supplementing with NAD+ is an all-natural way to help your body fight against aging and illness to feel healthier and more youthful.

ANTI- AGING

Slows the aging process, restores the appearance of the skin and reduces wrinkles, improves brain health and neurological function, improves mental clarity, boosts energy levels and metabolism.

BRAIN RESTORATION

Improves brain health and neurological function. Increases mental clarity, brain regeneration, focus, concentration, mood and memory.

ADDICTION RECOVERY

Assists in withdrawal from alcohol, opioids, and nicotine. Improves depression, anxiety, and mental clarity. Reduces cravings and symptoms associated with withdrawal. Restores energy and improves mood.

WEIGHT LOSS

Increases energy levels, decreases fatigue, restores muscle function and athletic performance, improves metabolism and helps decrease sugar cravings. Aids in weight loss and reducing inflammation.
