RAG vs Embedding vs Fine-Tuning vs Training

	Retrieval-Augmented Generation (RAG)	Embeddings	Fine-Tuning	Training LLMs
What is it?	Enhances responses of generative models by retrieving relevant information from a dataset or database.	Representation of data in a high-dimensional space, capturing semantic relationships.	Adapting a pre-trained model on a domain-specific dataset to improve performance on specific tasks.	Building large, general-purpose models from scratch that understand and generate text based on training data.
Example Use Cases	<ul style="list-style-type: none">- Enhancing chatbots with external data sources for more accurate responses- Improving search results with context-aware information retrieval	<ul style="list-style-type: none">- Recommendation systems- Sentiment analysis	<ul style="list-style-type: none">- Customized chatbots- Market analysis	<ul style="list-style-type: none">- Proprietary AI solutions- Data analysis and insight generation
Pros	<ul style="list-style-type: none">- Improves accuracy with dynamic data data- Enhances model's knowledge without direct training on the data	<ul style="list-style-type: none">- Captures nuanced relationships- Enables sophisticated analyses and predictions	<ul style="list-style-type: none">- Leverages power of LLMs with customization- Cost-effective compared to training from scratch	<ul style="list-style-type: none">- High degree of customization- Can be tailored to specific needs
Cons	<ul style="list-style-type: none">- Depends on the quality and relevance of the retrieved data- Potentially increased latency due to retrieval process	<ul style="list-style-type: none">- Requires substantial data for training- Difficult to interpret	<ul style="list-style-type: none">- Requires domain-specific dataset- Risk of model deviation if not monitored	<ul style="list-style-type: none">- Resource-intensive (time, computational power, data)- Requires significant AI expertise and infrastructure

Gen-AI in Business Functions

	AI Use Case	Tech Readiness	Impactful Technology
Customer Support 	<ul style="list-style-type: none"> - Chatbots for instant customer interaction - Sentiment analysis for feedback interpretation 	High	Fine-tuning + RAG
Sales 	<ul style="list-style-type: none"> - Predictive analytics for lead scoring - Sales forecasting and revenue prediction 	High	RAG + Embeddings
Marketing 	<ul style="list-style-type: none"> - Personalized recommendations and content - Customer segmentation for targeted campaigns 	High	RAG + Embeddings
Human Resources 	<ul style="list-style-type: none"> - Automated resume screening - Employee sentiment analysis 	Medium	Finetuning
Operations 	<ul style="list-style-type: none"> - Inventory forecasting - Supply chain optimization 	High	RAG + Embeddings
Finance 	<ul style="list-style-type: none"> - Fraud detection - Automated financial advising 	High	Fine-tuning
Product Dev. 	<ul style="list-style-type: none"> - Coding and Debugging - Market trend analysis 	Medium	RAG
IT & Security 	<ul style="list-style-type: none"> - Security and threat intelligence - Proactive system monitoring 	High	Training LLMs
Legal 	<ul style="list-style-type: none"> - Automated document review and analysis - Risk assessment and compliance monitoring 	Medium	RAG
Strategy 	<ul style="list-style-type: none"> - Market analysis and competitive intelligence - Scenario planning and strategic decision support 	Medium	RAG + Embedding

Adoption by Industries

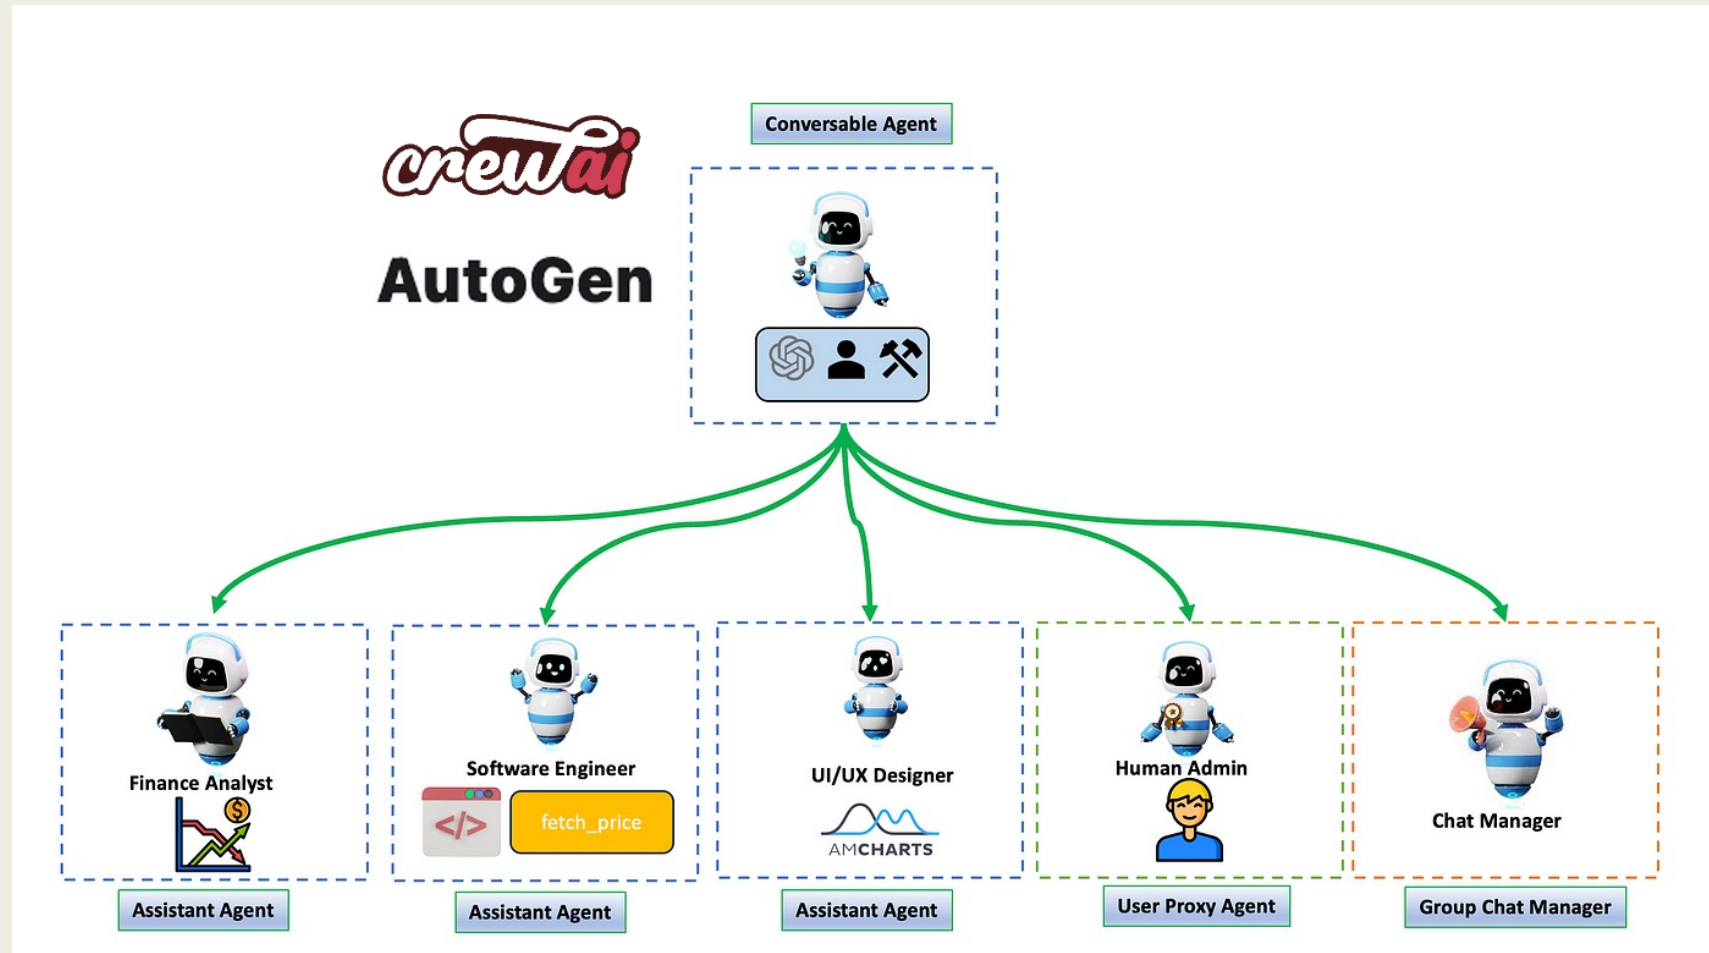

Our Prediction:

The Real Competition will be between:

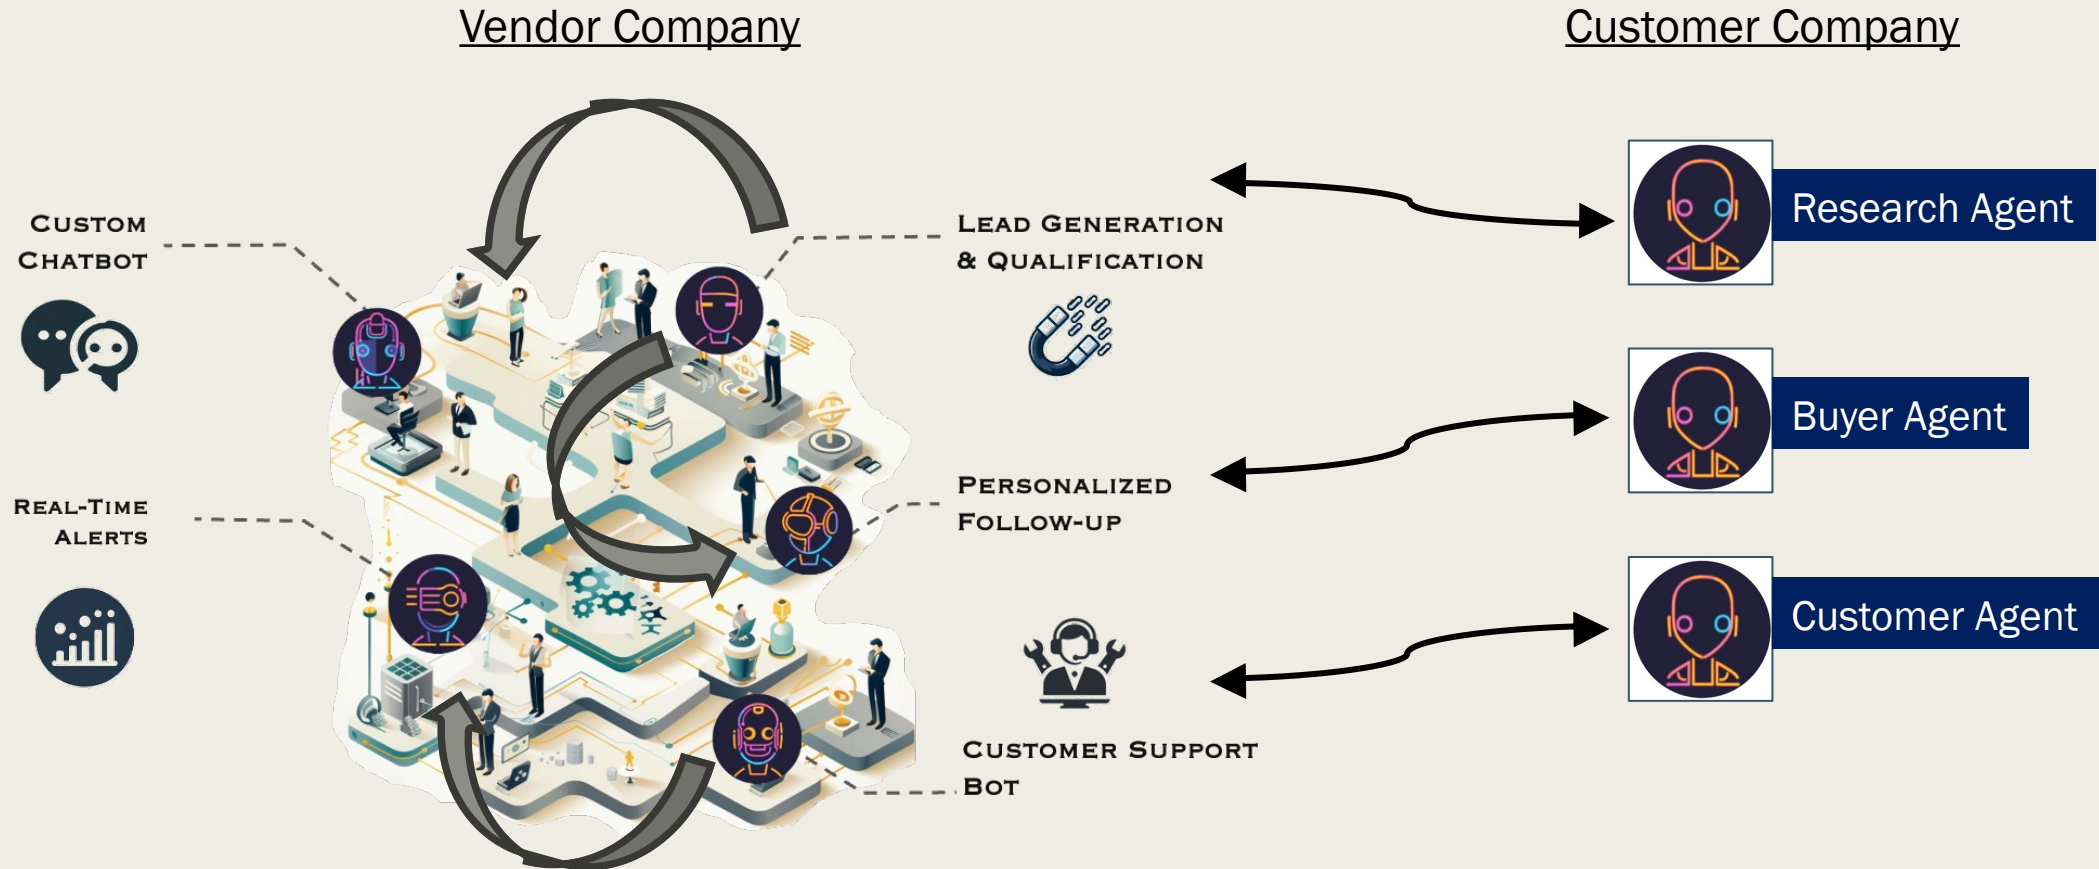

- AI-invested Incumbents
- AI-enabled Startups / Newcomers

Not Competition: Everyone else's Half-hearted attempts and Skeptics

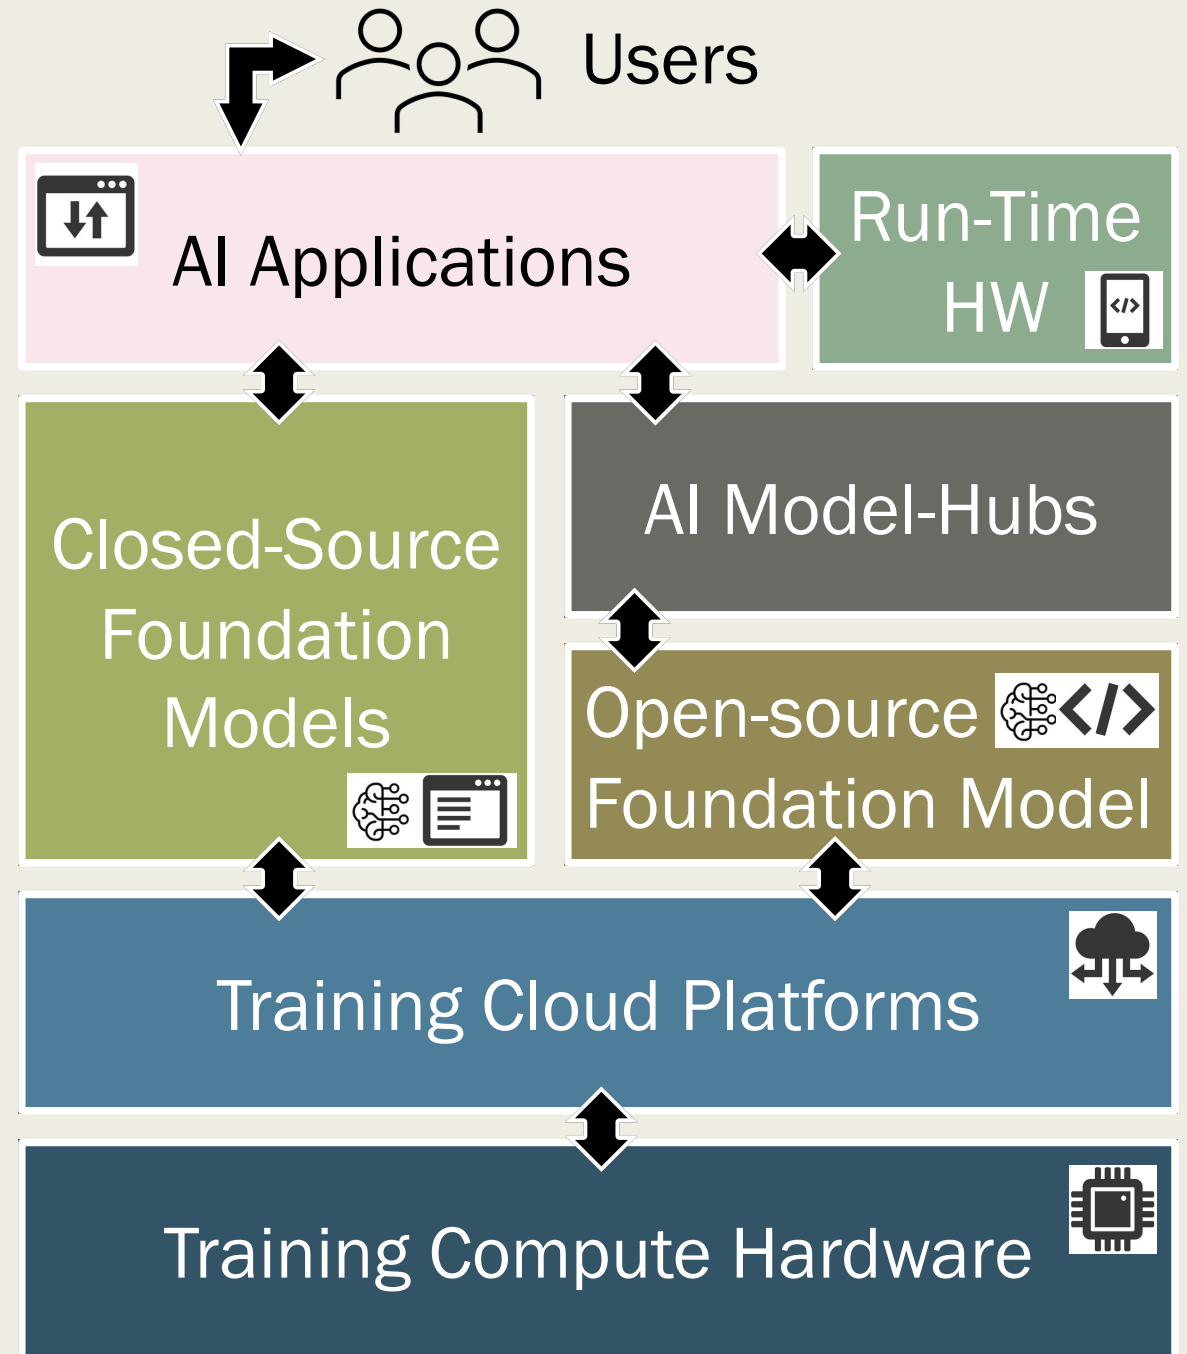

Multi agent systems

Multi-agent systems: Tech as a Team-mate

The Gen-AI Tech Stack

Other Predictions

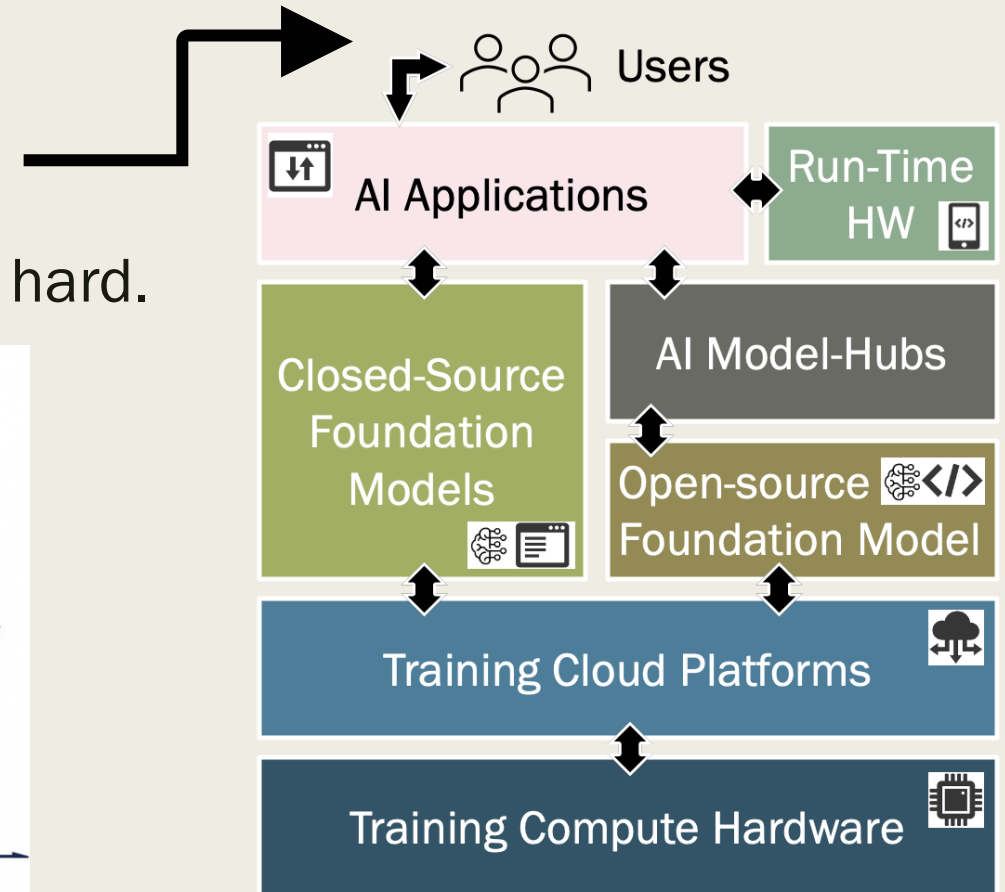

1. Unforeseen issues in A.I. adoption will be ...
2. Migrating away from Legacy systems will be hard.

Remember:

3. Start-ups will have an edge:

1 employee start-up will hit \$1B valuation

We work with CEOs and Executives to implement the AI strategy that is right for their business; grounded in deep technical expertise.
