Gristle, also called cartilage, is a tough and rubbery substance found in certain parts of the lamb, such as the joints or between bones. It provides structure and support to the meat.

When you have a lamb slice with gristles, it means that the slice includes some portions of the lamb that contain these connective tissues. The gristles are typically white or translucent in appearance and have a slightly chewy texture. They can add a different mouthfeel and texture to the overall eating experience.

The tongue is known for its rich flavor and unique texture, making it a popular delicacy in many cuisines around the world.

In terms of taste, beef tongue slices offer a rich, beefy flavor with a hint of sweetness. The meat is exceptionally tender, almost melting in your mouth, and it has a smooth and moist texture.

Beef tongue slices are versatile and can be prepared in various ways. They can be grilled, braised, pan-fried, or even used as an ingredient in stews, tacos, sandwiches, or sushi rolls. The slices are often marinated or seasoned with herbs, spices, and sauces to enhance their flavor before cooking.
