

Release 42 - The Highlights

Release 42 is now available. It's a big one with over 600 changes! Here are some of the top features in this release:

- The Water Hygiene module has seen a range of important updates including:
 - the implementation of risk supersession logic to give a clearer picture on the Client Portal
 - the introduction of a new "LRA Review" water project type which allows you to revisit previous LRA data
 - the extension of a number of key milestones to water data, including those for first day on site, last day on site, draft report produced and approved
 - the ability to "add all" for sentinels, assets, outlets, or location-based or type-based groups of assets or outlets
 - the introduction of "draft" reports
 - better visibility of scheduled and completed water projects.
- Instant AI analysis of survey items is available from your survey item photos.
- Further developments have supported the new scoring method for material assessments in Australia.
- Performance has been improved with an updated version of our software framework.
- There's a new Report Dashboard on the Home screen to give you an overview of report production.
- Some of the most popular imports now use the Alpha Tracker Work Queue for speed.
- Site-level security has been introduced with the ability to use separate QR passwords for site QR codes.
- Improvements have been made to site sharing and there is greater visibility of which sites are shared.
- A new tab on site registers lets you see items that have been hidden and gives you greater control over them.
