OneNetWood

Characteristic & Strength

There are many plastic wood products on the market, OneNetWood comes from recycled plastic waste, recycled plastic imitation wood products after crushing, without other wastes such as wood chips, textile fibers, etc., and is certified by the patented special process and SGS, and is environmentally friendly and non-toxic, odorless and no heavy metal residue.

The special patented core particle elastomer perfectly combines recycled plastic waste (not fragile), higher rigidity (higher rigidity than other environmentally friendly plastic wood on the market), weather resistance (high temperature resistance, no deformation), strong nail pulling force (foam characteristics melt secondary expansion and shaping), no moisture, inorganic antibacterial, and the overall wood texture surface produced by the special process can perfectly achieve the anti-slip effect without coating; Building materials and decoration materials that can be used both indoors and outdoors.

OneNetWood

Eco-Friendly Environmentally Safe
Sustainable Recyclability

The use of plastic waste recycling to generate 10,000-year-old wood will greatly reduce the impact of plastic waste on the environment, and every 1 metric ton of 10,000-year-old wood building materials generated can reduce the cutting down of a tree that is nearly 20 tons old for decades, starting from 10,000-year-old wood, so that the forest can be rested, reborn, and reborn. It is free of carbon fiber chips (allergens of respiratory tract and atopic dermatitis), so you can use it in indoor and outdoor home environments with peace of mind. OneNetWood is applicable to any general carpentry method. Not only that, after the decoration of the new waste, or after the use of several years of old waste dismantling, please do not discard, centralized to the original dealer for recycling, new and old waste recycling into the original factory, can be directly broken, remanufactured production process, sustainable recycling mechanism to create a 10,000-year wood endless life cycle and the whole process does not land, can be recycled, so there is no need to incinerate, bury, plastic products no longer for the environment, the earth pollution, and the problem of garbage.
