# ABOUT US

**Welcome to Rex Consolidated!**
**Rex Consolidated is a leading provider of high-quality solutions across multiple industries. With a diverse portfolio spanning sealants and gaskets, rotating beacon mounting brackets (DIN14620), fuel tank accessories and components, building construction and hardware components, fasteners, agri components, trailer parts, and precision engineering of metal parts and components—including for defense and aerospace applications—we are your one-stop destination for reliable, innovative, and precision-engineered products.**

**In the sealants and gaskets segment, we offer a comprehensive range of products designed to meet the most demanding sealing requirements across various industries. Our sealants and gaskets are engineered for durability, reliability, and superior performance, ensuring leak-proof seals and enhanced safety.**

**For rotating beacon mounting brackets (DIN14620), our precision-engineered solutions provide secure and efficient mounting options for beacon installations, meeting industry standards and ensuring optimal performance in diverse applications.**

**In the field of fuel tank accessories and components, Rex Consolidated offers a wide array of high-quality products designed to enhance the functionality, safety, and efficiency of fuel tank systems. From fuel caps to vent valves, we deliver solutions that meet the stringent requirements of the automotive, marine, and aerospace sectors.**

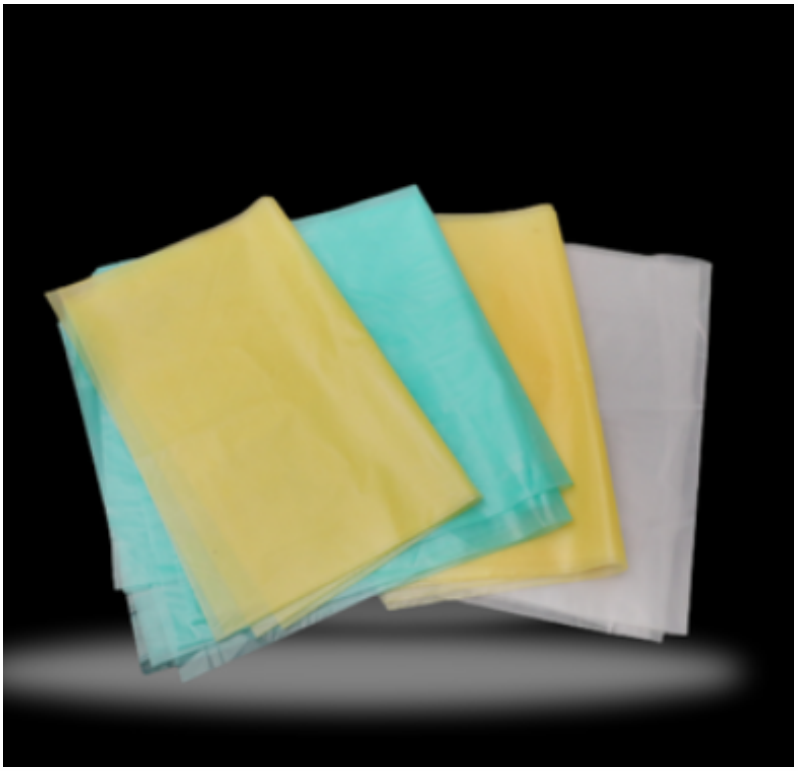

**Our expertise in building construction and hardware components encompasses a range of products designed to meet the needs of modern construction projects. From hinges and handles to brackets and connectors, our products are engineered for durability, strength, and ease of installation.**

**In the fasteners segment, Rex Consolidated offers a comprehensive range of fastening solutions tailored to the needs of various industries. From standard bolts and nuts to specialized fasteners, we provide products that meet the highest standards of quality, reliability, and performance.**

**Our range of agri components is designed to support agricultural machinery and operations with durable, field-tested parts. From linkages and implements to precision-cut wear components, we help maximize productivity and reliability in farming environments.**

**Rex Consolidated also specializes in trailer parts, offering robust, reliable solutions including axle components, couplers, jacks, lighting brackets, and structural fittings. Engineered for safety, endurance, and optimal load handling, our trailer parts serve both commercial and industrial hauling needs.**

# EVA BAGS

Low Melt Bag or Batch Inclusion Bags, also known as EVA Bags (ethylene vinyl acetate), are commonly used for packing materials in industrial. Batch Inclusion Bag is used for conveying additives to mixers with low operating temperature. They do not need to be unpacked, as these bags can be put directly into the mixer and mixed evenly with rubber without affecting the final product's quality. Its low melting point and compatibility with rubber make the final compound homogeneous.

# CPE POUCH & POLYBAG

CPE is chlorinated polyethylene, which is a polymer material made of high-density polyethylene (HDPE) through chlorination. High quality frosted CPE bags for electronics/coliphone wrapping bags & also used in hotel industries. It is made from virgin material with softness protecting for the electronics or cellphone case. CPE bag is one of our major products. It is soft, flexible, and strong pulling force. Self Adhesive tape that helps in reusing the bag. Its bio- degradable in nature.

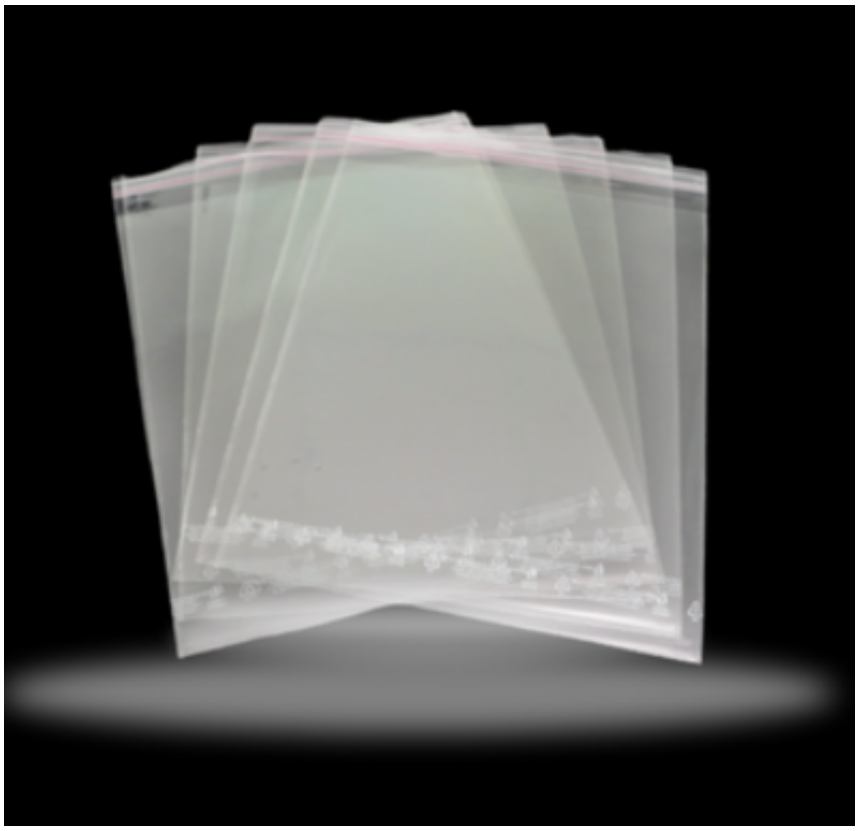

REX CONSOLIDATED

# RECYCLE POLYBAGS

Using Recycled Plastic bags is being very environmentally friendly as you are reducing the load of new plastic coming in use and also recycling of plastic is 90% energy efficient than recycling of paper and also generates and generates Zero air and water pollution.

REX CONSOLIDATED

# PP AND BOPP POLYBAGS

PP bags are mainly made of polypropylene. The main production processes are color printing and offset printing PP bags are generally woven bags, bright colors, are thermoplastic bags and have good stretchability. The material of the PE bag is mainly polyethylene. Biasially oriented polypropylene (BOPP) is a durable material that is commonly used for packaging bird seed pet food, deer com, and animal nutrition products it is also the packaging of choice for rice and minerals due to its strength and ability to hold weight without breaking easily

REX CONSOLIDATED

# COMPOSTABLE POLYBAG

Polybags range of compostable bags are derived from natural renewable resources to reduce the impact of the packaging on the environment. This renewable packaging is manufactured from sugar cane, potato starch and other renewable resources that can be converted into chemicals and polymers using conversion processes similar to those of traditional polythene

REX CONSOLIDATED

# LDPE POLYBAG

Low Density Polyethylene (LDPE) tubing is used for wir and praumatic lines, fluid feeds, chemical transfer wine Jacketing, food and beverage processing, potatile water systems, drams, pool and spa supply lines, and more

REX CONSOLIDATED

# OXO BIODEGRADABLE POLYBAGS

OXO-degradation is the degradation of polymers such as plastic by an oxidative process. Such degradation breaks down plastic into small pieces that are easier to biodegrade.

REX CONSOLIDATED

# HDPE POLYBAGS

High Density Polyethylene-This makes HDPE more durable and more resistant to punctures or tears, but less flexible than LDPE, HDPE is commonly used for heavy-duty packaging for bulk or blunt-edged products or to make opaque plastic containers

REX CONSOLIDATED

# ZIPPER BAG

A Zipper plastic bag is a bag-shaped packaging material that is resistant to water and dirt and is durable. It is used for many purposes such as garment bags, packing products, managing small accessories and protecting from dust.

# COMPOSTABLE POLYBAG

A Zipper plastic bag is a bag-shaped packaging material that is resistant to water and dirt and is durable. It is used for many purposes such as garment bags, packing products, managing small accessories and protecting from dust.

REX CONSOLIDATED

# BUBBLE WRAP BAG

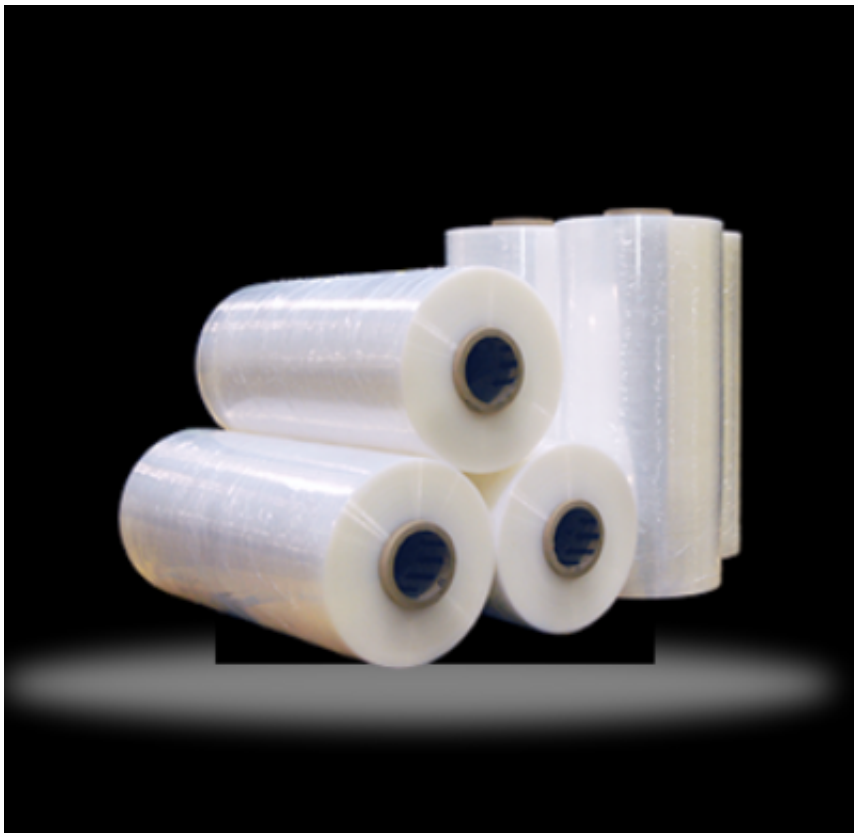

Bubble wrap is made of polyethylene, which is a type of plastic that contains hundreds of evenly spaced air pockets. These air pockets then act as a soft cushion that absorbs shock during unexpected movement.

REX CONSOLIDATED

# RECYCLABLE RAW MATERIALS

Recyclable materials are used or old materials that can be used to make some other materials, they are called recyclable materials because they can be recycled. They are capable of being used to make similar products.

# STRETCH WRAP FILM

Stretch Wrap is a thin, stretchable plastic film (typically made from polyethylene) that is used to lock and secure cased goods onto a pallet. As the stretch film is wrapped around the pallet, tension is applied, enabling the film to extend its length by up to 300%.
