

The image features a blue oval with a black border. Inside the oval, a water droplet is shown falling into a pool of water, creating concentric ripples. The text 'Ion Fresh' is written in white, sans-serif font, with a white horizontal line underneath it. Below the line, the words 'Restructured Water' are written in the same white, sans-serif font.

Ion Fresh
Restructured Water

Ion – Fresh Water RE-STRUCTURED WATER

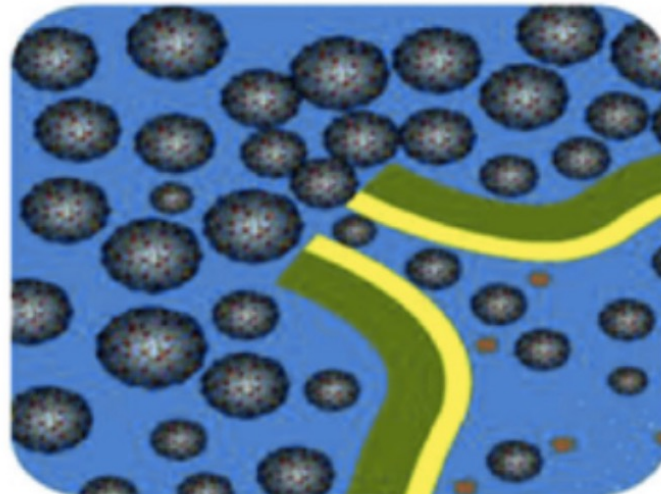

- Re-Structuring and ionizing water happens in nature when water clatters down through a waterfall or along a mountain wall, breaking the water down into smaller particles, **WITHOUT ELECTRICITY!**
- This allows the water to **ABSORB MORE OXYGEN, MINERALS AND NUTRIENTS.**

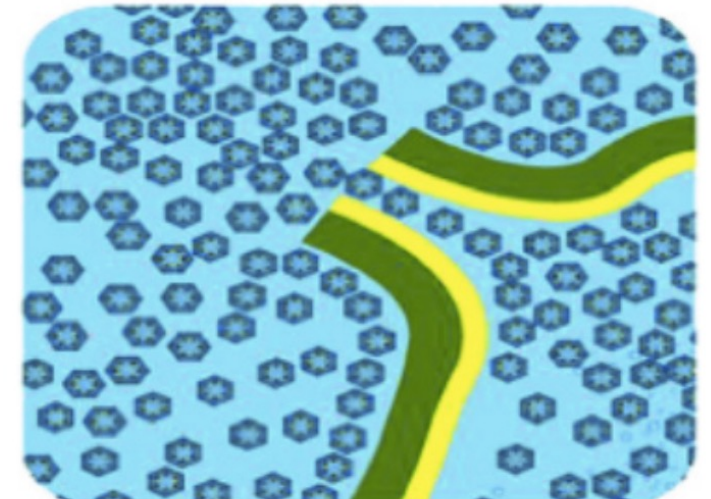

The scientific differences between re-structured and unstructured water molecules

- **Peter C Agre** Nobel Peace Prize 2003
 - Discovery of Aquaporins, the key to hydration
- **Dr. Gerald Pollack** of the University of Washington
 - 4th phase of water
- **Rustum Roy** of Penn State University
 - retained frequency of 440,000 units
- Physicist **Dr Wolfgang Ludwig**
 - transfers coherent memory to organisms

UNSTRUCTURED DIRTY WATER MOLECULES

RE-STRUCTURED PURE WATER MOLECULES

RE-STRUCTURED WATER

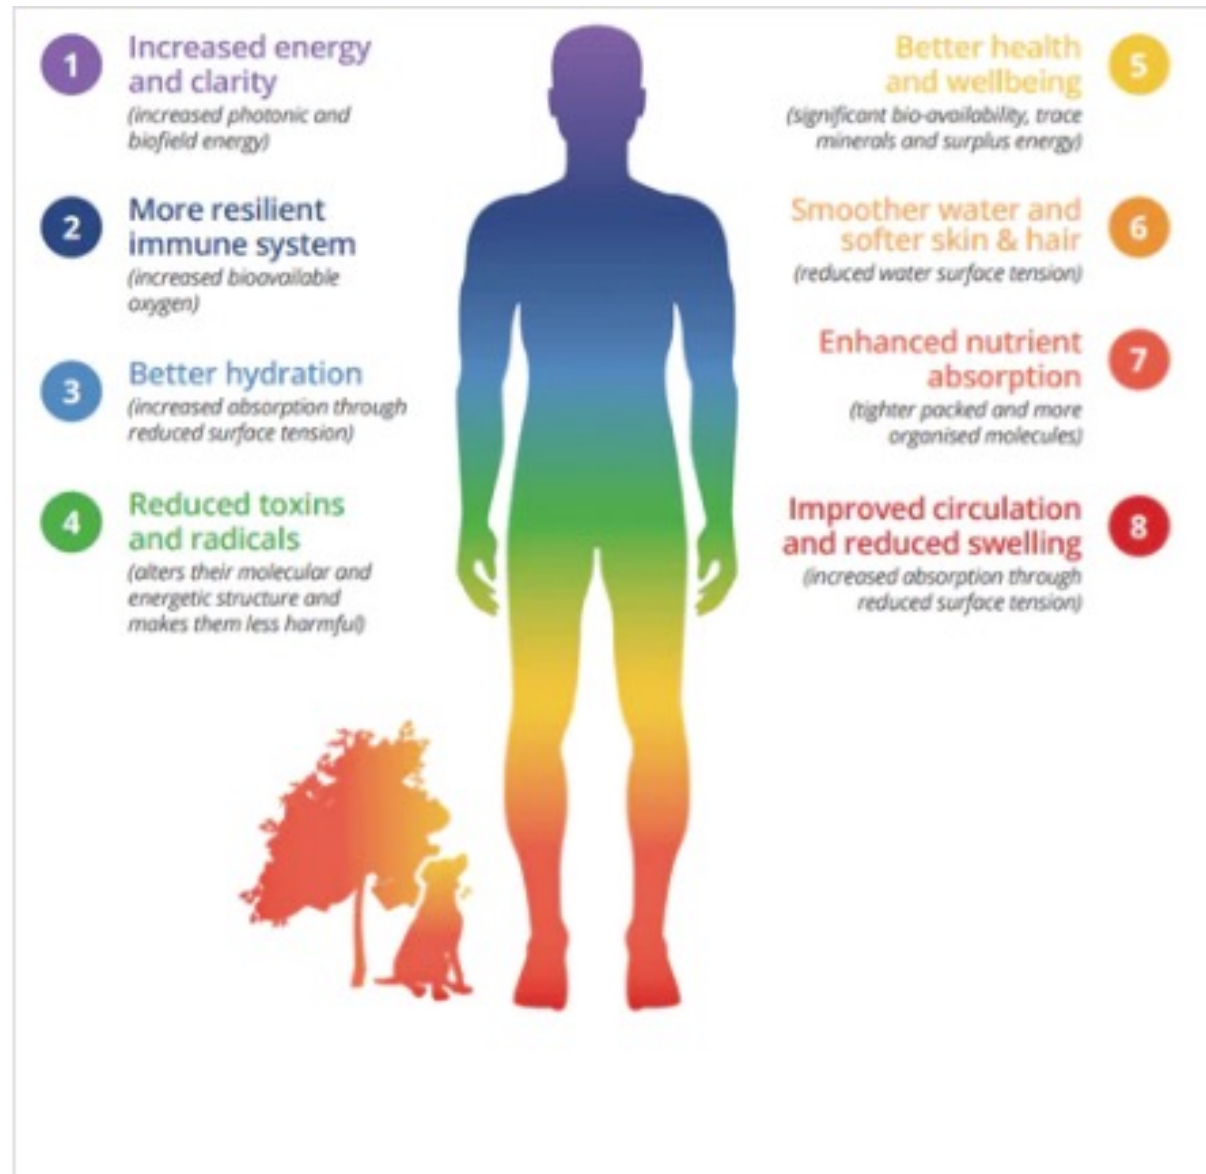

- *INHIBITS the growth of pathogens
- *REDUCES the pathogenic load
- *High Energy Load (Bovis Rating)
- *Highly Oxygen-Rich

Used in homes, commercial spaces, agriculture, horticulture, pools, and spas.

It is one of the most beneficial forms of hydration for humans, animals, and plants.

There are numerous health benefits related to and researched for Restructured Water

Water Molecules

Organic Nutrient
Rich Particles

In-Organic Compounds
and Free Radicals

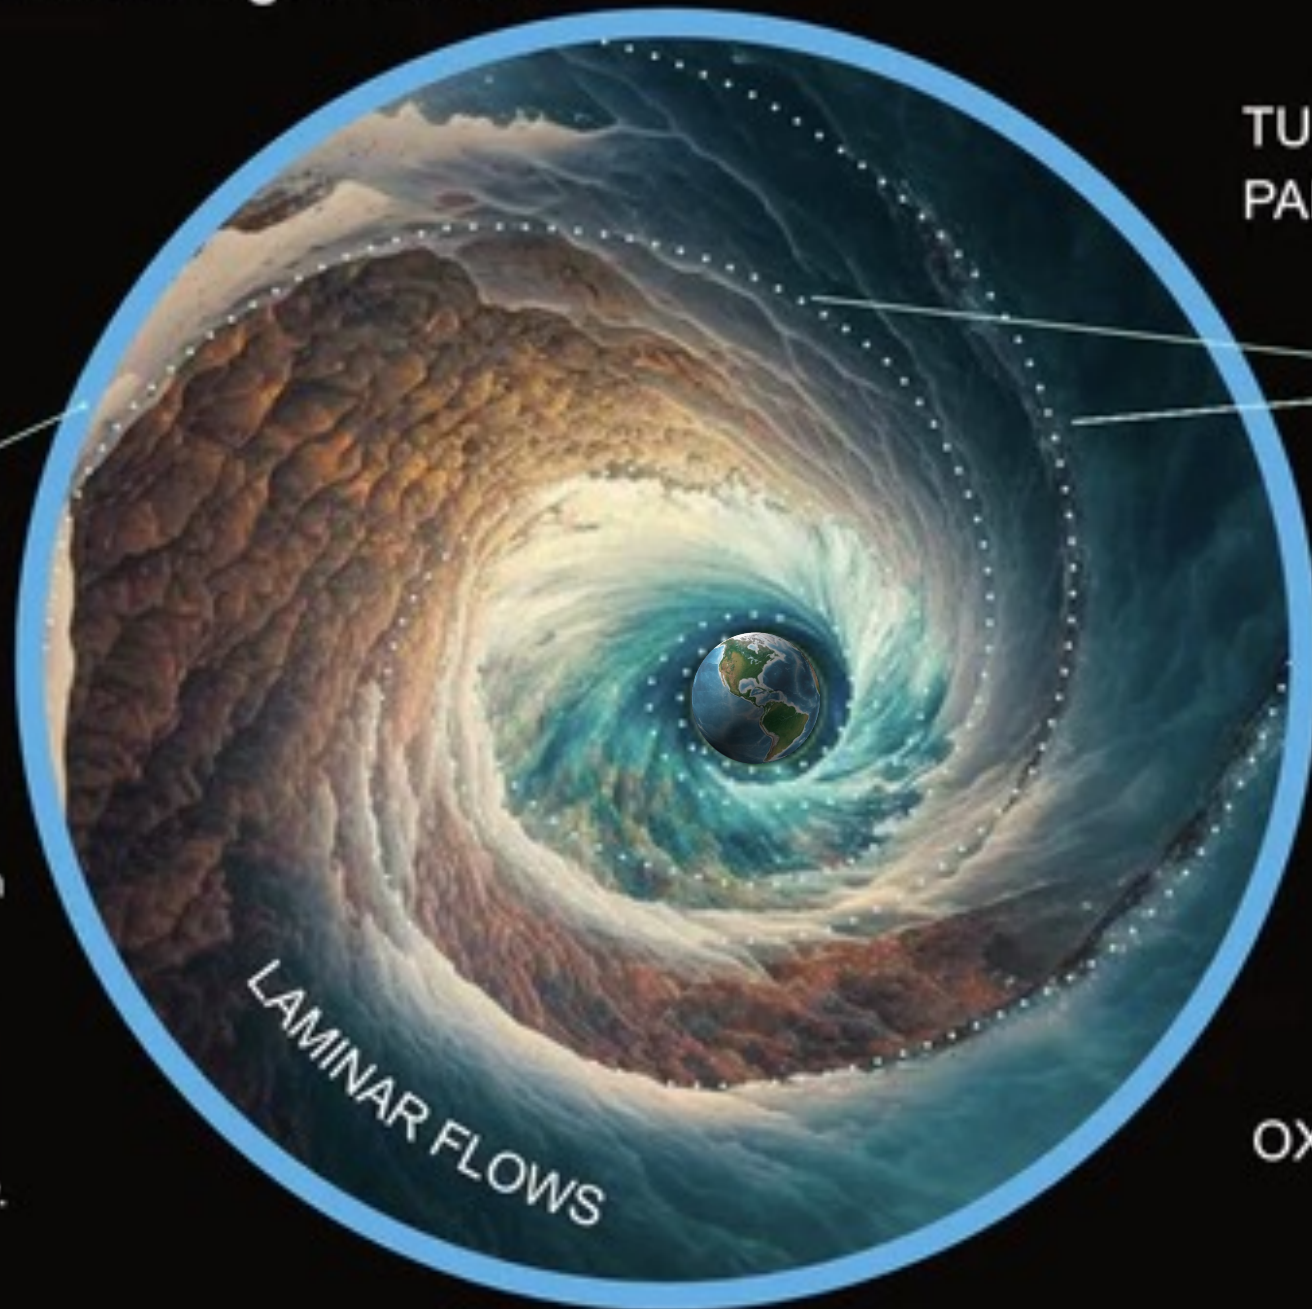

Aligned Organized Water
Molecules

As the water becomes more organized it begins to align elements and affect their structure. The water then separates itself into two functions; that which more efficiently delivers nutrients and carries unwanted elements away more effectively.

Amazing work of vortex generation.

The fixed wall circumference applies constant pressure of movement of particulates across the boundaries of laminar flows, which cause them to be broken up and reduced in size, thus increasing their biocompatibility and bioavailability.

TURBULENCE ZONES
PARTICLES REDUCED

OXYGEN LIBERATION

Our units have Bovis Values of 306,000

-GDV is the
technology used to
measure this QUANTA

Increased hydration, decreased toxicity, reduced bacterial load, viral load, algae, and fungus.

Fresh Water for Homes, Pools, Gardens, Lawns

- High-energy, highly oxygen-rich water inhibits the growth of pathogens and reduces pathogenic pressure.
- Improves water quality
- Reduces the chemical load
- Reduces absorbed toxic burden

The power of a waterfall in
your home, pool, hot tub,
garden, or lawn.
