

Introducing Windows 11, an OS designed for hybrid work

The next evolution of Windows is here. Windows 11 is built on the familiar Windows foundation but reimagined to boost employee productivity and enhance collaboration on the most secure version of Windows yet.

More productive for employees

A simple, powerful UX can help their employees focus and be more productive. A streamlined UI helps cut through the clutter and reduce cognitive load. Snap layouts and personalized Widgets make it easier to stay organized. Workflows can be automated right from the desktop.

More collaborative experiences

The new Windows features a smarter way to collaborate with Microsoft Teams¹ integration. Meet and share content easily. Mute and unmute right from the taskbar. Auto-blur and noise cancellation keep background activity where it belongs – in the background.

Consistent for IT

Adoption is easy with app compatibility and cloud management. Migrate with confidence knowing your favorite apps and familiar management tools from Windows 10 will still work, backed by the App Assure promise. There's also more control over updates and the ability to deploy remote PCs in compliance with company policies.

 Windows 11

Introducing Windows 11, an OS designed for hybrid work

Secure for all

Help protect your data and access with a Zero Trust-ready OS. Safeguard your business data and identity with powerful built-in security, including hardware-based isolation, encryption, and malware protection. Easily protect user identities with password-less security.

What about Windows 10?

Rest assured that as customers chart their path to Windows 11, Windows 10 devices will still receive updates, helping them remain productive and secure.

What do I do next?

Sign up now for the Windows Insider Program for Business to use Windows 11 now – and test it out.
