To Whom It May Concern:

During the past 4 months we have used LakeHawk Technologies system to help reduce the number of waterfowl on our golf course with great success. It is the first time in many years that we have seen anything work as well as the LakeHawk system.

LakeHawk was consistent with their game plan and over all work standards are very high. The numbers of birds were reduced by 50% in 4 weeks and continued downward ultimately reaching a 93% reduction overall.

We anticipate using them again in the Fall of 2016 on a more frequent basis and look forward to the new technology they expect to deploy.

Sincerely,

Kim Wood
