

# RECOMMENDED VOLUME SETTINGS FOR YOUR SYSTEM BY SOURCE (RANKED BY SOURCE)

HERE AT SOUNDZ WE STRIVE TO PROVIDE YOU WITH BEST AND MOST ACCOUSTICALLY PLEASING SOLUTIONS IN THE MARKET.

WE UNDERSTAND THAT EVERYONE HAS A FAVORITE APP OR MUSIC SOURCE THEY PREFER, UNFORTUNATELY NOT ALL SOURCES ARE CREATED EQUAL. AS SO WE HAVE RANKED THEM IN ORDER OF QUALITY, CLARITY & EFFICIENCY.

THE VARIATION IN MAXIMUM USABLE VOLUME IS TO ALLOW FOR THE DYNAMIC RANGE OF MUSIC FROM ONE SONG TO ANOTHER. YOU WILL FIND THIS AS YOU GO THROUGH YOUR MUSIC LIBRARY, NOT ALL SONGS WILL HAVE THE SAME VOLUME WITH CLARITY.

**-IPHONE PLUGGED IN RUNNING AMAZON MUSIC** – Best! Use this 3-5 bars from the top on 14+ models, and 30-35 on Jensen HD1BT.

**-IPHONE PLUGGED IN RUNNING APPLE MUSIC** – Use this 4-6 bars from max on 14+ models, and 28-32 on Jensen HD1BT.

**-IPHONE PLUGGED IN RUNNING PANDORA MUSIC** (**STRONGLY DISCOURAGED**) – Use this 6 bars from max on 14+ models. 30-32 on Jensen HD1BT.

**-IPHONE PLUGGED IN RUNNING SPOTIFY** (**STRONG DISCOURAGED**) – Use this 6 bars from max on 14+ models. 30-32 on Jensen HD1BT.

**-IPHONE PLUGGED IN RUNNING YOUTUBE (JUST CALL THE WARRANTY DEPARTMENT, YOU'RE ALREADY SCREWED)** – I wish we were joking, this source is **VERY** terrible. Use sparingly for that one or two times you can only find something on this source. Half volume 14+, 25-30 for Jensen HD1BT.

**-XM RADIO (THE 90'S CALLED AND THEY WANT THEIR SIGNAL SOURCE BACK)** – While this USED to be CD quality, that ended within a couple years of its existence. This will be 6 bars back from max, and sometimes only half volume on 14+ models. 25-30 on HD1BT. Keep in mind that the signal quality of each channel varies based upon listener demand and satellite capacity, so this will always vary.

**-IPHONE VIA BLUETOOTH (WHYYYYYYY? JUST PLUG IT IN)** – This is for use sparingly. Signal clarity is drastically noticeable when plugged in, just stop being lazy, buy that new cord already, your \$1000 iPhone is worth it 😊!

**-ANDROID 2019-CURRENT (GTS RADIO) USE ANDROID AUTO.** (This Is Your Very Best Android Option) 4-6 bars from max on 14+ models with a GTS radio installed.

**-ANDROID VIA BLUETOOTH 2014-2018 RUNNING AMAZON MUSIC (THE SECOND BEST WAY TO RUN ANDROID) BLUETOOTH VOLUME ONE NOTCH DOWN FROM MAX. ALSO MAKE SURE YOUR ADVANCE SOUND FEATURES AND EQ ARE SET TO FLAT. "THIS ALSO APPLIES TO THE SONY AND JENSEN HD1BT RADIO FOR 98-13 MODEL BIKES."**

As a reminder, the 4.3, 6.5GT, and GTS radios should always be 3 bars from max as your max volume under any circumstance, speed volume set to **OFF**. This doesn't mean you can just run it 3 bars back for any and all sources, music is dynamic and is different from song to song, genre to genre, do some homework and listen to some of your favorites and get familiar with how far you can go before it distorts, then back it down.

Jensen HD1BT radios are set for **MAX** clean performance 30-35 depending upon source and song clarity. Same rule, listen to your favorites, get familiar, and then you can enjoy!
