Find your favorite easy chair and hopefully the following 20 pages of chemical information will gain you satisfactory weed control and high yields. Value and performance working together.

We own and operate a 22 year continuous corn farm. We also own and operate a licensed and insured independent chemical retail business in its 27<sup>th</sup> year near Hinckley (Northern Illinois). Advice with spraying issues, please call 815-739-7700. Ask for Roger.

We recommend Aztec and Fence insecticide to improve yields and standability with high planting populations and rootworm pressure.

We also recommend fungicide and insecticide applied to all acres for best disease control.

Waterhemp is the #1 worst weed problem moving into northern Illinois. We have modified our chemical choice pages for 2026 to include additional waterhemp control practices for corn. See page 3. Waterhemp is everywhere and spreading.

117 day corn - planted March 30, 2025
