## Customer obsessed

Our expert customer care team are always here to help you

Driving an EV and smart charging with Ohme could get you **6x** further - saving money and reducing CO<sub>2</sub>

### Price per mile - EV charging vs Fuel

#### Diesel

#### Petrol

#### EV charging

#### Ohme Charging and Smart tariff

£ = 1p

## What's smart charging?

You might have heard about smart charging before, but what exactly is it? Put simply, it refers to a system that uses data connections to find the best charging times. Ohme's smart EV chargers communicate with your car, our servers, and the National Grid to work out the cheapest and greenest times to charge.

## What's in it for me?

### Charge when it's cheapest

Ohme can stop and start charging to align with periods of low demand on the grid when prices are generally cheaper.

### Lower CO<sub>2</sub> emissions

Ohme drivers can also cut the CO<sub>2</sub> emissions by up to 70% when smart charging, so you can save money and do your bit for the environment.

### Save money

Ohme drivers save on average up to £600\* per year compared to drivers with a standard charger and tariff.

### Ohme ePod

- Compatible with all plug-in electric vehicles (EVs) and all electricity tariffs
- Compliant with the latest Smart Charge Points Regulations
- Control your EV charging via the charger buttons or our trusted app
