Introduction

Teka Kitchen Division

In Kitchens, Teka numbers among the leading sink and built-in appliance brand, manufacturing quality home appliances, commercial equipment and most importantly - Kitchen sinks.

It is one of the world's largest producers of sinks and the only technology manufacturer in today's market offering a fully integrated range.

Teka is a world-wide brand with sales offices and production facilities in every corner of the world in over 125 countries in 5 continents. In addition to its own facilities various agents across the world have chosen Teka as their company partner.

Table Bay Distributors Official Supplier

Teka is a world leader in the field of stainless steel sinks. Originally, Teka was selected as a result of several leading kitchen manufactures requesting a bigger and better range of sinks than what was currently available on the South African market. However, with their superb design and reliable quality, Teka soon became the first choice for more and more home owners throughout South Africa.

Currently Table Bay Distributors, with Teka offers the most extensive range of inset and undermount sinks available on the South African market. The underlining success of the Teka/TBD relationship is based on the thinking that the consumer should select the features they would like to have on a kitchen sink and not the manufacturer. After all, it should not be an unreasonable request to want a sink with deeper bowls.

Inset Sinks

Teka inset sinks are impressive in every aspect. Inset sinks from Teka are far from the norm, each sink range has its own unique styling on both the bowls and drainer board.

Inset sinks bowls are generally larger and deeper than their competitors, and all feature 18/10 stainless steel with thickness ranging from 0.6mm - 1.2mm. From entry level to exclusive, Teka is sure to have an inset sink to suit your personal taste and budget.

Mixers

A limited range of Teka mixers are stocked as part of our South African offering.

These mixers are both beautiful in design and excellent in quality. Each mixer contains a ceramic cartridge which allows smooth operation for years to come.

Contract Sinks

Teka sinks cover every price point without compromising quality.

Specifically manufactured for high quantity development schemes, contractors sinks are manufactured with the same high quality as the rest of the Teka product range.

Undermount Sinks

Teka undermounts are by far the most popular sinks in the South African market. We boast the largest range of undermounts in the southern hemisphere and do so because we believe every individual is unique.

Undermounts are manufactured by the highest quality standards with stainless steel thickness of 1.2mm.

Waste Disposers

Homes that employ the use of waste disposers are entering into the new age of cleaner and greener living.

Food waste is quickly and easily disposed off, eliminating potential pest and smells from sharing your kitchen.

Microtextured Sinks

Microtextured sinks are manufactured from stainless steel, the textured finish hides scratches while maintaining a stainless steel look and resistance. Microtexture offers an attractive high relief pattern on the sink's surface. This exclusive finish is also made from 'surgical' stainless steel, i.e. with all the characteristics of stainless. The stainless steel hard-plus finishing gets better result indeed than the standard stainless steel thanks to the special treatment applied to the surface that improves the hardness and the resistance against scratches, making it an ever lasting perfect piece of design in the kitchen.

Teka, almost 90 years of creative genius

Innovation and a strict commitment to the highest quality standards are two ideals that make Teka the first choice for more and more homes.

Since 1924, Teka group has dedicated all its resources and expertise to achieve one single goal : improving the quality of life of millions of customers. From an innovative design to improved features, every production process undergoes constant improvement.

All this while paying special attention to each detail. Because at Teka, even the smallest detail counts. When you consider just how much time you spend at the kitchen you realise how important it is to have a kitchen that combines design with user-friendliness.

When purchasing a kitchen sinks it is extremely important to consider each sink's key features and how they can improve your lifestyle.

are you looking for inspiration?

The secrecy of the hidden...

The popularity of undermount sinks is growing because of what they offer to kitchen design. Get the best from your luxury countertop and the desired kitchen design without having any obstacles for cleaning.

Teka undermount series offer a huge collection of shapes, sizes and configurations that can easily be customised adding more single units or accessories. Undermount sinks should be used only with solid countertops of marble, granite or modern composite materials such as Caesarstone. Materials such as Formica and other wooden products are advised against due to the nature of the application and the countertops exposure to water.

Teka undermount sinks are mounted with specialised clips, to ensure that the sink is held strongly in place. Undermounting gives the sink and surroundings a much sleeker appearance. It prevents dirt from getting trapped around or below the rim, it keeps the countertop free from the clutter of daily dishes and kitchen living.

There are many advantages to using undermount sinks :

Food spills and other debris can be easily collected and pushed right into the sink. It leaves a smooth surface that is easy to clean and you need not worry about materials getting trapped on the rim of the sink

Due to its seamless nature, it does not require that much attention or maintenance efforts. You can simply wash it with soap and water, or simply wipe it, and its sparkling clean once again.

Linea R15 undermounts

Trend setters

Just a quick glance is enough to notice that the new Linea sinks are made of something different. Setting new standards is never easy but every once in a while, one new idea shows up leading the way to new concepts that perfectly fit in today's way of life.

R15 Linea R0 takes on perpendicular lines throughout the sink with 0mm radii at every edge, however

perpendicular corners can often be the home of bacteria and dirt when not cleaned correctly. The R15 range of sinks feature a 15mm radius on the corners of the sink, this makes it easier to clean and has a slight designer curve to it.

DISCOVER THE AMERICAN PROFESSIONAL SINK

Stunning design, professional performance

R11,000.00
list price excl. VAT

The American Professional Series combines a modern and elegant design with the performance and usability of a professional sink. Problem	Solution	Comments
Routine cleaning- All grades and finishes	BLANCOPOLISH or BLANCOACTIV applied with soft cloth or sponge. Rinse and wipe dry	If possible, use a warm to hand-hot solution. A 5% addition of ammonia is beneficial
Fingerprints - All finishes	Pre-treat marks with alcohol or an organic solvent. Follow immediately with routine cleaning	Minimise re-occurrence by applying a wax or silicone based household polish to the clean, dry surface
Stubborn stains and discolouration- All finishes except coloured Stainless Steel.	Use a small amount of a creamy paste of mild household abrasive cleaner on a cloth made wet with detergent solution as per routine cleaning. Rinse and dry	Repeat several times rather than resorting to a single aggressive cleaning method. If some stubborn stains persist use a fine synthetic scourer pad instead of a cloth. Rub gently
Lime scale deposits from hard water	Prolonged soaking in a 25% vinegar solution or a 5% nitric acid solution. Periodically rub with a nylon bristled brush or fine synthetic scourer pad	Can usually be prevented by regular routine cleaning. Do not allow excessive build-up before treating
Grease, fats and oils- All finishes	Wipe off excess with soft cloth or paper towel. Use a water-borne or water-soluble de-greasing agent followed by Routine cleaning	
Rust marks due to presence of or contact with ferrous materials	If heavy, swab with a sponge moistened with a dilute (10-15%) solution of nitric acid (HNO ₃). Follow by Routine Cleaning	Avoid any contact of ferrous (iron) containing materials with Stainless Steel. Dilute nitric acid (HNO ₃), in strengths of up to 20%, is a "friendly" acid to Stainless Steel. It is the ONLY acid which may be used with no risk to Stainless Steel
Dark oxide scale from welding or heat tints	Pickling and passivating plus thorough water rinsing as outlined previously. Follow by routine Cleaning	Slight heat tints may be removed by repeated application as for stubborn stain and discolouration
Scratches on polished (lined) finishes	Slight scratches - Use a nylon pad loaded with an iron-free abrasive polishing compound. Follow the direction of the original polish lines. Follow with routine cleaning. Deep scratches – coarse abrasives should be used initially. Follow as for slight scratches	Deep scratches will be difficult to remove completely. Do not use metal scourers or wire wool unless they are made from Stainless Steel

It must be appreciated that some of the above suggested procedures will alter the surface appearance of the treated area compared to that of the original surface finish. They should therefore be applied only with due consideration and care

Cleaning Procedure

Clean the Stainless Steel as often as experience dictates (i.e. when noticeably dull or dirty); and use the simplest cleaning procedure that will effectively "do the job".

- Stainless Steel's best friends are clean water or mild detergent solution, applied with a soft cloth or sponge, rinsed well and wiped dry.
- Routine simple, gentle and inexpensive cleaning will retain both the corrosion resistance and appearance of Stainless Steel through years of exposure and use. Occasionally a small amount of Inox Crème may be used on a soft cloth made wet with the detergent solution to remove stubborn dirt or slight incipient stains. Rub gently

Cleaning Do's

- Employ regular routine cleaning rather than an occasional aggressive single cleaning.
- Only use propriety brands of cleaners that state "SUITABLE FOR STAINLESS STEEL", such as BLANCOPOLISH. - Always rinse and dry as the final step in a cleaning procedure

Cleaning Don'ts

- Do not use coarse abrasive powders.
- Do not use metallic scourers or brushes with metal bristles.
- Do not use the so termed "silver cleaners".
- Do not use acids (except nitric acid in specific instances).

Storage of Products

Product research has proved that certain household products which may be stored underneath a sink, can lead to damage to the sink's base. Chlorine is the major culprit and can be found in: chlorine for swimming pools; household bleach; bathroom cleaning products like toilet cleaners, mildew treatments and tile cleaners; kitchen cleaning products – especially liquid cleaners; powders for dishwashers and laundry detergents. Preserve the life and beauty of your sink by storing these products away from the sink area in a well ventilated cupboard that is child-proof.

These products are imported from Europe and as a result are subject to fluctuations in currency. While we endeavour to keep prices unchanged we reserve the right to change listed prices without notification. Please always confirm prices at the time of placing your order. While Table Bay Distributors has used its best endeavors to ensure that the information provided in this price list - including (but not limited to) technical specifications, measurements, colours and prices - are accurate and up to date at the time of issue, does not warrant that it is correct or complete. We reserve the right to make corrections and changes without notification and unless otherwise stated and agreed upon in writing, Table Bay Distributors makes no warranties of any kind, express or implied, that good sold are suitable for any particular purpose or application under any specific condition. It is recommended that every item should be thoroughly tested by the purchaser to determine performance suitability before use of goods.
