

YORKIE PET CARE GUIDE: HYPOGLYCEMIA AWARENESS

WHAT IS HYPOGLYCEMIA?

Hypoglycemia means Low blood sugar—a potentially life-threatening condition—specially common in Yorkie puppies and teacup-sized adult Yorkies:

🍼 AT-RISK AGES

- 6 weeks to 4 months old
- Teacup or very small Yorkies of any age
- Dogs under stress, illness, or who have missed meals
- Senior Yorkies with *Diabetes* or liver issues

⚠️ SIGNS TO WATCH FOR:

- Seizures
- Collapse
- Unconsciousness
- Coma

If you notice these signs, act immediately!

🏠 WHAT TO DO IN AN EMERGENCY

-  **Rub Sugar on Gums**
Use Karo syrup, honey, or syrup.
Apply a cotton swab or finger
-  **Warm Your Dog Up**
Wrap in a blanket:
Keep them warm and quiet
-  **Offer Food**
A small meal—high in protein
-  **Call or Visit Your Vet Immediately**
Even if Yorkie seems better,
they need to be checked by a vet

👤 TIPS FOR YORKIE OWNERS

- ✓ Always carry a sugar source when traveling
- ✓ Use a puppy-safe carrier with blankets for warmth
- ✓ Never skip meals—routine is key
- ✓ Post this guide near your Yorkie's feeding area!

🗨️ TALK TO YOUR VETERINARIAN

If hypoglycemia becomes frequent or severe, you:

- Liver shunt
- Infections
- Diabetes

🐾 Healthy Yorkie, Happy Life

A well-fed and monitored Yorkie is a thriving one. Stay informed, prepared, and attentive to your dog's needs.
