

Section 9.36. of the National Building Code of Canada (NBC)

This form clarifies the design option chosen for a new building, addition or major alteration to comply with NBC Section 9.36.

All calculations must be completed by a <u>competent person</u>* (or design professional if NECB 2017 is used) and be attached to this form to be considered complete and accepted for review.

* <u>Competent Person</u> means a person, firm or corporation who is knowledgeable and experienced in the application of NBC Section 9.36. for the design of buildings and/or building systems.

Project Address				Application Num	ber (Office Use):				
Occupancy Class									
Floor Area (m²)				Climate Zone	7A				
Design Option: Prescriptive Complete Section 'A' Design Option: Trade-Off Complete Section 'A' Complete Sections 'A & B' Complete Section 'C'									
Section A: Prescri	<u>ptive</u>			Conve	ersions:				
HRV / ERV: Yes]	No 🗌		R = 5.678 x RSI	U = 1 / RSI				
Effective Thermal Re	sistance of Ab	ove Ground Opag	ue Building	Assemblies (RSI)					
Assembly		w/ HRV	w/o HR		Proposed				
Ceilings below attics		8.67	10.43						
Cathedral / Flat roofs		5.02	5.02						
Walls & Rim joists		2.97	3.08						
Floors over unheated spaces		5	.02						
Floors within garage		4	.86						
Thermal Characterist	tics of Fenestr	ation, Doors and S	Skylights (U)						
Assembly			iency	Proposed					
I Windows X. Doors		Maximum U-Value 1.60 on Minimum Energy Rating ≥ 25		or					
		Maximum U-Value 2.60							
Attic hatch		Minimum RSI _{eff} 2.60							
Skylights	Maximum U-Value								
Effective Thermal Re Building Assemblies		elow-Grade or In-C	ontact-With-	Ground Opaque					
Assembl	y	w/ HRV	w/o HR	V F	Proposed				
Foundation Walls	Walls 2.98 3.		3.46						
Slab On Grade With Integral Footing		2.84	3.72						
Unheated Floor Below Frost Line		uninsulated	uninsulat	ed					
Unheated Floor Above Frost Line		1.96	1.96						
Heated Floors		2.84	2.84						

Section 9.36. of the National Building Code of Canada (NBC)

Section A: Prescriptive (Continued)

HVAC Equipment	Performance Rec	uirements						
Equipment	Capacity K	W Standard	Min. Efficiency	Proposed				
Gas Fired Furnace	<u><</u> 65.9	CSA P.2	AFUE≥ 92%	•				
(w or w/o A/C)	> 65.9 & <u><</u> 117	.23 CAN/CSA-P	.8 E _t ≥78.5%					
Electric Boiler	<u><</u> 88		(1)					
Gas Fired Boiler	<u><</u> 88	CSA P.2	AFUE ≥ 90%					
	> 88 & <u><</u> 117.	23 AHRI BTS	E _t ≥ 83%					
Other								
Heat Loss / Gain Calculations	Calculations were prepared in conformance with CSA F280							
Nomenclature	AFUE= annual fuel utilization efficiency, E₁= thermal efficiency							
Water Heater Perfe	ormance Require	ments						
Equipment	Capacity KW	Standard	Min. Efficiency	Proposed				
	≤ 12 kW		SL ≤ 35 + 0.20V (top inlet)					
	(50 L to 270 L capacity)		SL ≤ 40 + 0.20V (bottom inlet)					
Tank Storage (Electric)	< 12 kW	CAN/CSA-C191	SL ≤ (O.472V) - 38.5 (top inlet)					
	(>270 L and ≤ 454 L capacity)		SL≤ (0.472V) - 33.5 (bottom inlet)					
	>12 kW (>75 L capacity)	ANSI Z21.10.3/CSA 4.3 & DOE 10 CFR, Part 431, Subpart G	S = 0.30 + 27 / V _m					
Tank Storage	< 22 kW	CAN/CSA-P.3	EF ≥ 0.67 — 0.0005V					
(Gas Fired)	≥ 22 kW	ANSI Z21.10.3/CSA 4.3	E _t ≥ 80% and standby loss≤rated Input/(800 + 16.57)(√V)					
	<u><</u> 73.2 kW	CAN/CSA-P.7	EF ≥ 0.8					
Tankless (Gas Fired)	> 73.2 kW	ANSI Z21.10.3/CSA 4.3 and DOE 10CFR, Part 43I, Subpart G	E ≥ 80%					
Tankless (Electric)	No standard addresses the performance efficiency; however, their efficiency typically approaches 100%							
Other								
Nomenclature	EF = energy factor inS = standby loss inV = volume	%h, SL = standby loss i						

⁽¹⁾ Must be equipped with automatic water temperature control. No standard addresses the performance efficiency; however, their efficiency typically approaches 100%.

Section 9.36. of the National Building Code of Canada (NBC)

Section B: Trade Off

All calculations must be completed by a <u>competent person</u> and attached to this form in order to be considered complete and accepted for review. The location and extent of assemblies used in the calculation shall be clearly identified on the drawings by hatch or note.

- □ **Opaque to Opaque** One or more above-ground opaque building envelope assemblies are permitted to be less than required, provided one or more above-ground opaque building envelope assemblies are increased to more than required.
 - Walls and joist type roofs must maintain minimum 55% of the required RSI_{eff}
 - All other assemblies must maintain minimum 60% of the required RSI_{eff}
 - The sum of the areas of all traded assemblies divided by their RSI_{eff} must be less than or equal to what it would have been if all assemblies had met NBC 9.36.2.6.
- ☐ **Transparent to Transparent** One or more windows are permitted to be less than required, provided one or more windows are increased to be more than required.
 - The traded windows must have the same orientation.
 - The sum of the areas of all traded windows divided by their RSI_{eff} must be less than or equal to what it would have been if all windows had met NBC 9.36.2.7.
- □ **Opaque to Transparent** This option is meant to allow reduced insulation for factory-constructed buildings with a low floor to ceiling height and a fenestration and door area to gross wall area ratio of 15% or less.

Section 9.36. of the National Building Code of Canada (NBC)

Section C: Performance

This option is available only to houses with or without secondary suites, and buildings that contain only dwelling units with common spaces that are less than 20% of the building's total floor area.

Full modelling summary reports for the reference and proposed house, completed by a competent person and generated from Hot 2000 v15 or an ANSI/ASHRAE 140 compliant software, is required to be submitted with this form in order to be considered complete and accepted for review.

Input Parameters				Referen	Reference Model Proposed Model			
Airtightness (air exchanges per hour @ 50 Pa)								
Heat Loss / Heat Gain								
HRV efficiency								
Thermal mass (MJ/m ²	°C)							
Ventilation rate (I/s)								
Fenestration and door	to wal	I ratio (FDWR) – reference	(%)					
Direction of front elevation (clearly circle one)					E SE W NW	N NE E SE S SW W NW		
Area of windows and o	doors	Front elevation (m ²)						
		Rear elevation (m ²)						
		Left elevation (m ²)						
		Right elevation (m ²)						
		Total area of windows (m ²)						
	Total area of opaque door	doors (m ²)						
Energy use (GJ)
