NOTES to PEPU Developers:

- Having launched two tokens on the PP, I've run into the need to edit the token's image, website, & social media link but don't see how to do this. If I own the token, I need to be able to edit it's properties. Please provide this capability and add to your documentation.

EDITOR's DESK – Day 20 of YOTFB Project.

MAIN NEWS PAGE (1):

PEPU Army - Welcome to the "GigaBrain" newsletter. Ignore all the FUD and stay focused. Keep buying PEPU while the price is low, stake and hold. Stay focused and tune out all the crap postings about this project. Stay positive, I think we have a great future with this coin and platform. Looking at the pepuscan.com block explorer, we see some good cumulative transaction growth over time (below). Very positive! Today, I explored the thirdweb platform and posted some resource and softdev links to the yotfb.io web site. Include API developer info for coinbase.com

Social Media:

UPDATE: So I thought I could just rename my X account: cryptjoe3336 to yotfb, but it created a new one. So I renamed it back. I have two X accounts now: cryptjoe3336 and YOTFB. I'll be posting to YOTFB account going forward, but will mention my other account in the bio/profile. Sorry for that confusion, **just want to brand this correctly as YOTFB as it is my key 2025 initiative/project for PEPU.**

PEPU TIMELINE (2): Some day by day notes of our journey...

As we peer into the Block Explorer, we are identifying additional data points to collect, aggregate and report on.

ROADMAP (3): The big picture and plans/architecture.

I have a Visio diagram of my vision and YOTFB components. It's evolving...

APP DEVELOPMENT (4): Info about our PEPU ecosystem application development project: **TWOPU (word game)**

Looking at thirdweb.com information – learning about in-app wallets, what they are. See why PEPU developers chose thirdweb platform...

In-App Wallets in Web3 Applications

An in-app wallet is a cryptocurrency wallet integrated directly into a Web3 application, allowing users to store, manage, and interact with their crypto assets **without needing an external wallet like MetaMask or Ledger.**

These wallets streamline the user experience by providing seamless access to blockchain functionalities inside the app itself.

To find **Thirdweb Developer Documentation** – go to this portal address: <https://portal.thirdweb.com>

Included pricing info for thirdweb development. Basically, \$0 for starter plan requiring basic features

COMMUNITY NUGGETS (5): Info and thoughts from community contributors.

Included <https://pepustake.com> link as this application seems to be evolving...

DEX/CEX (6): Any news about our Tier 1 exchange listings...

Our online petition requesting BINANCE and COINBASE list PEPU is getting some traction. We are up to 83 signatures as of today. Let's keep pumping and pushing the petition (chnng.it/M2LXyyH2v4)

PUMP PAD (7):

Featuring ALICE today for 3rd day in a row. She looks for professional. Love it!

Trying to search within the block explorer to find the number of tokens isn't clear. If anyone has thoughts on this, let me know.

PEPU INVESTING (8): Discussion about PEPU tokenomics – not an expert in finance, but will gather other thoughts. Hot to buy, claim/stake and sell PEPU tokens.

PEPU BLOCK EXPLORER (9): Info about the pepuscan.com site and block explorer – Good stats!

Added screen shot of the pepuscan.com/stats page. See 5,619 tokens and 33,891 wallet addresses. We'll be tracking this info going forward

YOTFB.IO WEBSITE (10): Info about the organization, layout and content of our YOTFB project site.

In-App Wallets in Web3 Applications

An in-app wallet is a cryptocurrency wallet integrated directly into a Web3 application, allowing users to store, manage, and interact with their crypto assets **without needing an external wallet like MetaMask or Ledger**. These wallets streamline the user experience by providing seamless access to blockchain functionalities inside the app itself.

How In-App Wallets Work

User Onboarding

Users can create a wallet within the app using their email, social login (Google, Apple), or a passwordless method like magic links.

The app often handles key management to make onboarding easier.

Key Management

Non-Custodial: Users retain full control over their private keys, often stored on the device or secured via MPC (Multi-Party Computation).

Custodial: The app or a third party manages the private keys for a smoother user experience.

Transaction Signing

Users can sign transactions directly within the app.

Gas fees may be abstracted or covered by the app (via meta-transactions).

Blockchain Interactions

The wallet enables users to buy, sell, stake, swap, or interact with smart contracts within the app. It may support multiple blockchains (Ethereum, Solana, PEPU Layer 2, etc.).

Benefits of In-App Wallets

- ✓ Seamless UX: No need for external wallet extensions or apps.
- ✓ Frictionless Transactions: Users can interact with dApps effortlessly.
- ✓ New User Friendly: Simplifies onboarding for non-crypto-savvy users.
- ✓ Cross-Platform: Works on web, mobile, or even embedded in games.
- ✓ Gas Abstraction: Some wallets cover transaction fees to improve usability.

Examples of Web3 Apps Using In-App Wallets:

Coinbase Wallet SDK – Allows Web3 apps to integrate an embedded wallet.

Argent – A smart contract-based wallet with gas-free transactions.

Magic (ex-Fortmatic) – Enables login-based Web3 wallets.

Thirdweb Smart Wallet – For developers to embed Web3 wallets in dApps.

PEPU Layer 2 Wallets – Could be integrated into projects on PEPU blockchain.
