»» The Pillar Candle rectangular chandelier from Restoration Hardware has a hand-rubbed bronze finish that adds warmth to the metal. All the wiring is hidden within the chandelier frame so the faux candles

with a flicker bulb look "real." We like the energy efficiency because the bulbs are 15 watts maximum and can be placed on a dimmer for less energy usage. Also, metal chandeliers can be recycled at the end of their life cycle and low-voltage halogen or dimmers can limit energy usage. (Available at Restoration Hardware, Chicago.)
