

How Solar Batteries Help You Night & Day

People often ask ‘Can solar panels work at night?’ The short answer is no. But with a battery, in effect they do. During the day, when solar panels are generating more power than your property is using, excess power is diverted to the battery for use later. When the sun goes down, or if you’re using more energy than your panels are providing, the battery will kick in to give you power and prevent drawing from the grid.
