# SH-30GAL Melter

The Soft Heat SH-30 Gal is the next generation of portable crack sealant melters. It is ideal for small to large scale crack sealant jobs on streets or parking areas with melting production rivaling trailer mounted machines. Thanks to its heat sourcing of infrared technology, initial startup and recovery times are less than half that of traditional torch fired units. The virtually even distribution of heat across the burner surface combined with the actual flame never touching the arched material floor yields undamaged hot crack sealants at an astonishing rate. Fuel usage is a fraction of traditional units. No more annoying blow-outs means even lower operating cost without the frustration of time lost.

In warm weather or below freezing temperatures, the massive heating panel on this unit extends the full length of the machine and wraps the entire melting chamber in over 900 degrees of soft, even, reflective heat. Constructed of 14 ga. Steel, standard features include temperature gauge with guard, cast draw off valve, built in hand agitator, self-storing lifting handles, and hinged lid with safety opening handle. Fuel injection takes place safely concealed under the machine. The regulator is self-maximizing to prevent over pressurizing of the burner and hose is 8' of protective braided stainless steel. Battery powered electronic ignition and back up lighter stick port means you are never stranded with an unsolvable ignition problem. Quality construction by skilled tradesmen in the USA means reliable performance for years.

## SPECIFICATIONS:

Length - 45"

Width - 26'

Height - 46"

Capacity - 30 Gallon

Weight - 235 Lbs.
