printing and packaging

P-9

P-9 Inserter Feeder

Straight Shooter, the company that brought you buckle separation, repositionable feed belts, and easy belt changes has done it again!

Introducing the all new P-9 inserter feeder

We asked mailers what they would like to see in a friction feeder for their inserting machines and they answered clearly... "Simplicity!" Straight Shooter delivers with our patented paper guides and integrated photo eye, eliminating the need for additional guides on the inserter and cumbersome photo eye adjustments common with competitive machines.

Setting up the feeder is simple, and can be done away from the insert station. Then simply position in the hopper and away you go! The P-9 can even be moved from one station to another with no adjustments necessary!

***Make your
inserter more
versatile and
productive!***

The P-9 makes other inserter feeders obsolete!

Straight Shooter feeders are known for feeding hard-to-handle materials, like magnets, plastic bags, folded mail, stapled booklets and more. Now you can have those capabilities for your swing-arm inserter!

Traditional vacuum operated inserter feeders don't handle many of today's challenging inserts very well. Open ended pieces, pieces that vary in thickness, and thin paper are difficult at best. Not with the P-9! Simply slide the P-9 into position in one of your inserter hoppers and you have a better inserter on your hands! Don't waste time hand stuffing or fighting vacuum feeders. Let the P-9 handle it.

The P-9 fits easily into position on your swing-arm inserter. Set up can be done away from the hopper. When done, just slide into place!

Our unique acceleration section delivers the pieces faster and with better separation than competitive station feeders.

Our Patented paper guide extensions guide the document right into the gripper, eliminating extra components and touchy photo eye adjustments!

Also available – the D-9 Demand Feeder

Our unique acceleration table design makes the D-9 the ideal small machine for demand (one-shot) applications like collators, adding stations to inserters and much more!
